Mission concept: Low Resolution Mode (LRM), Synthetic Aperture Radar (SAR) mode and SAR Interferometric (SARIn) mode.

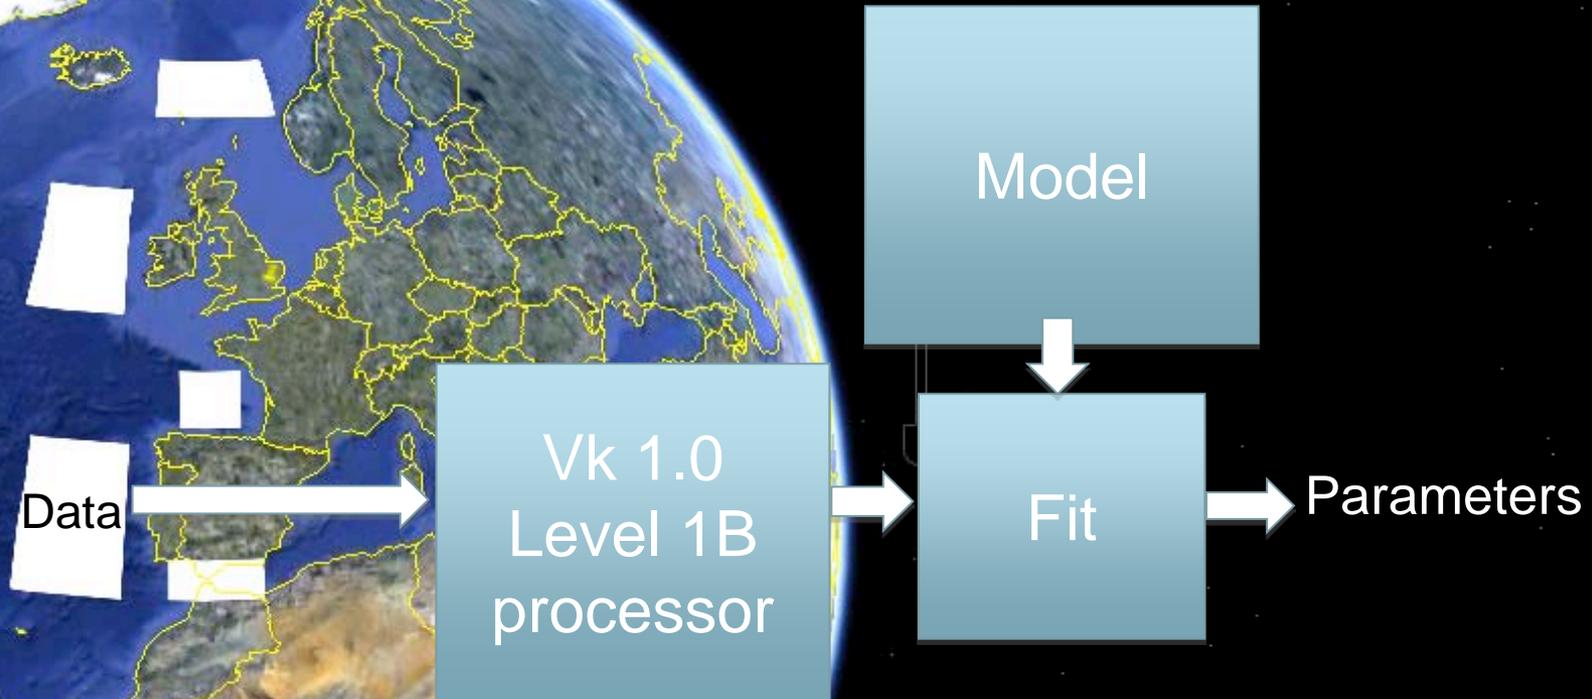

[Wingham et al., Adv. Sp. Res., 2006]

CryoSat-2 SAR mode over the open ocean

- Can we see an improvement in the precision of the range measurement and significant wave height in the CryoSat-2 data?

We note here that CryoSat-2's SAR mode is not designed to give the maximum number of looks possible in SAR mode, this experiment is designed to directly compare measurements taken in SAR mode and pulse limited mode. Raney (2012) has described the instrument set up required to obtain the maximum number of looks.

Model

$p_r(\tau) = p_t(\tau) * p_z(\tau) * I(\tau)$ General expression for the mean each power (Brown, 1977)

$p_t = p_0 g_p \text{sinc}^2(\pi B\tau)$ Transmitted power pulse from CryoSat-2
 $p_z = \frac{1}{\sqrt{2\pi\sigma}} e^{-\frac{1}{2}(\tau/\sigma)^2}$ Surface elevation pdf

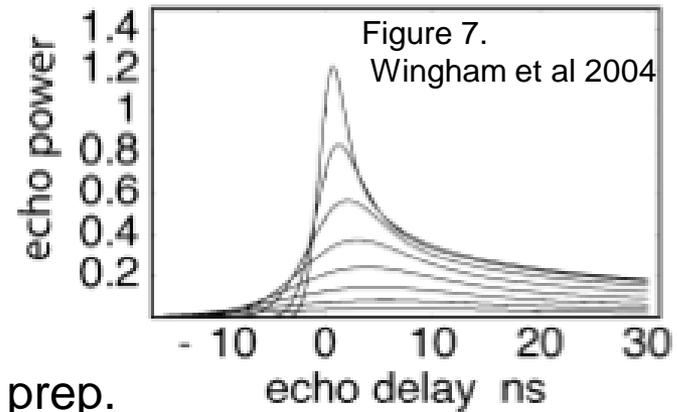

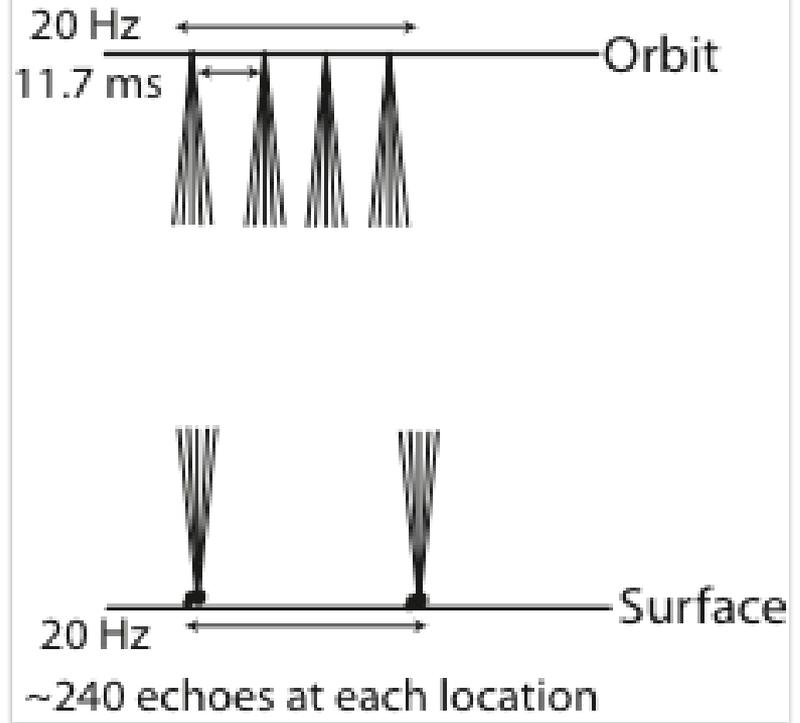

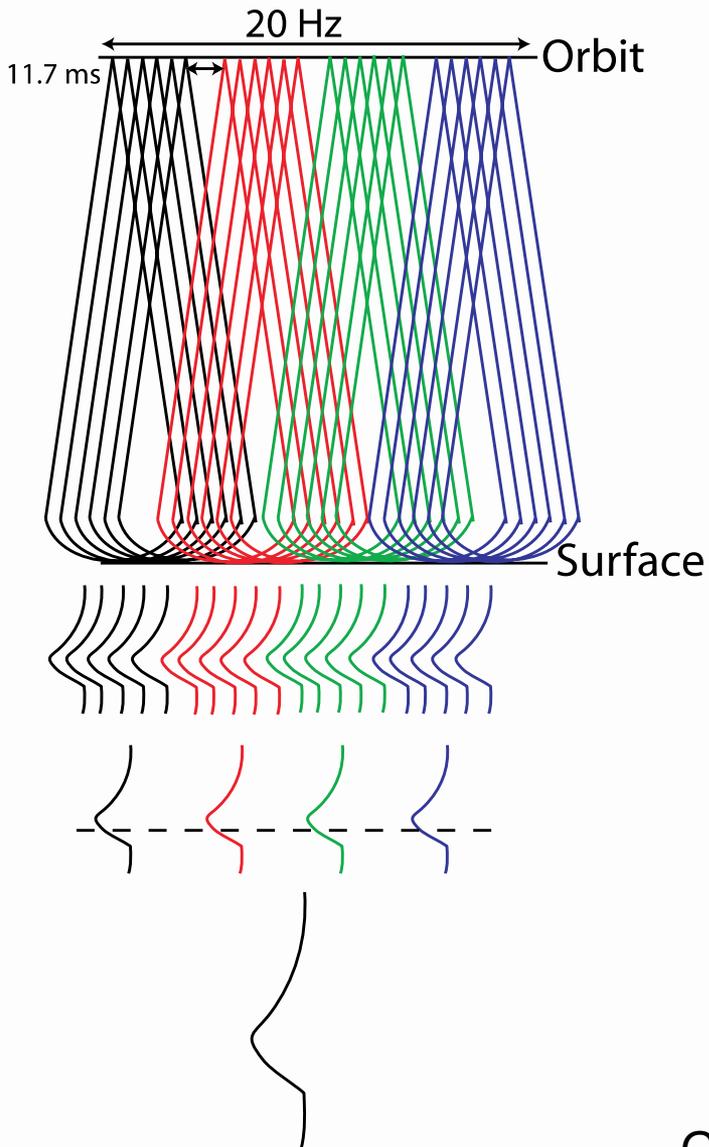

I depends on the backscatter (σ^0), antenna gain and range from the radar to the surface

One-way gain of a synthetic beam

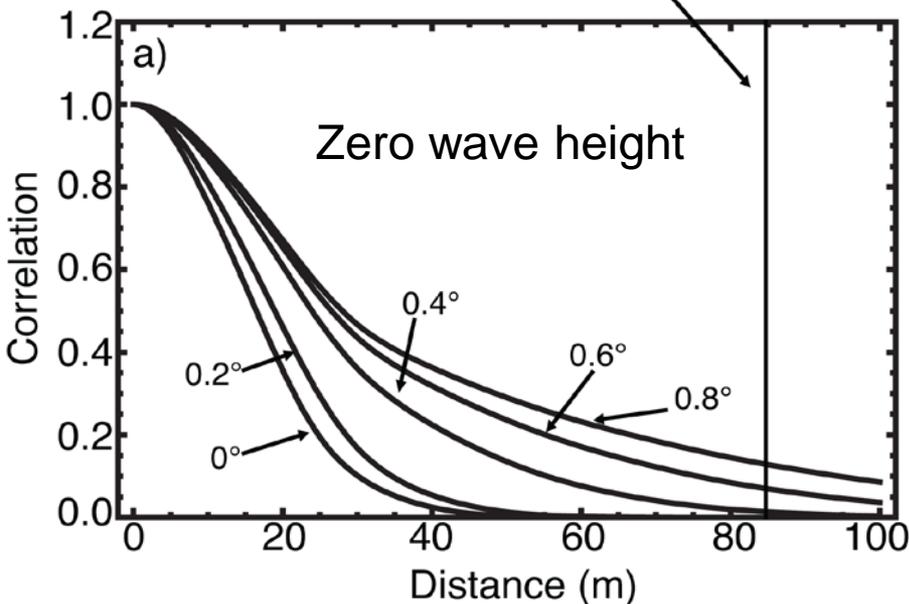

$$I(\tau) \sim \frac{\lambda^2 G_0^2 D_0 c \sigma^0}{32 \pi^2 h^3 \eta} \sum_{k=-\frac{(N_b-1)}{2}}^{\frac{(N_b-1)}{2}} H\left(\tau + \frac{\eta h \xi_k^2}{c}\right) \int_0^{2\pi} d\vartheta \exp\left[-2\left(\frac{(\rho_k \cos \vartheta - \xi_k)^2}{\gamma_1^2} + \frac{(\rho_k \sin \vartheta - \chi)^2}{\gamma_2^2}\right)\right]$$

Integration around a range ring $\int_0^{2\pi} d\vartheta$
 Summation over N_b looks $\sum_{k=-\frac{(N_b-1)}{2}}^{\frac{(N_b-1)}{2}}$
 The pattern of a synthetic beam at an angle $(\rho_k \cos \vartheta - \xi_k)$ from its boresight in the along track direction.
 Elliptical antenna pattern $\left[\frac{(\rho_k \cos \vartheta - \xi_k)^2}{\gamma_1^2} + \frac{(\rho_k \sin \vartheta - \chi)^2}{\gamma_2^2}\right]$
 pitch γ_1^2 roll γ_2^2

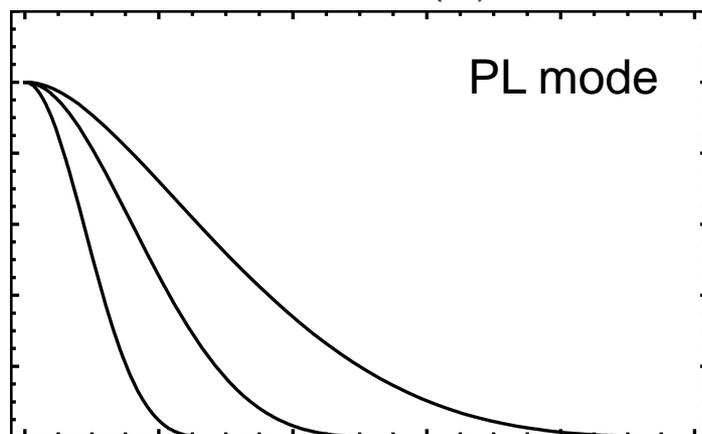

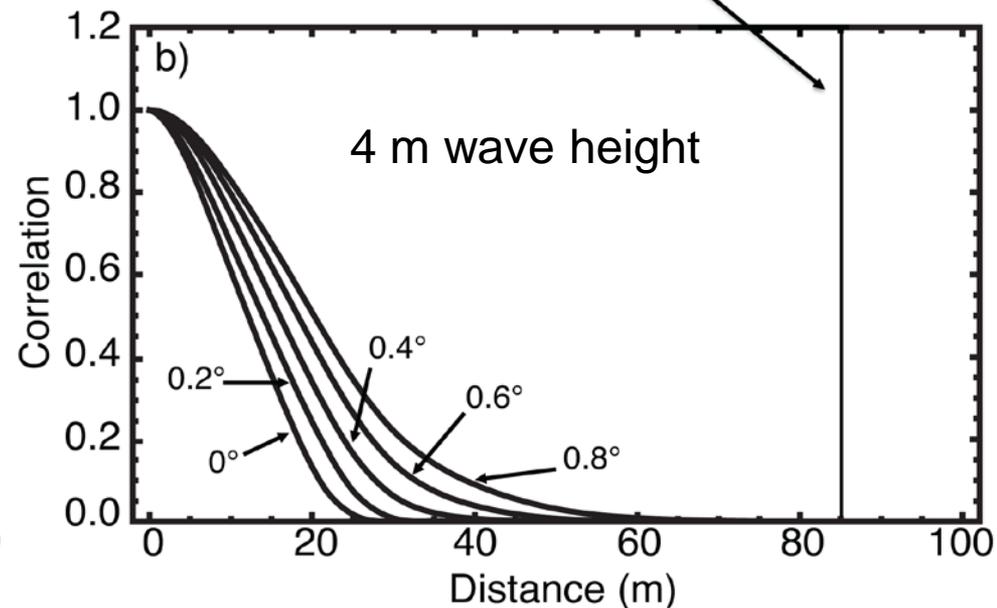

Wingham et al., 2004

SAR mode burst separation (84 m)

SAR mode burst separation (84 m)

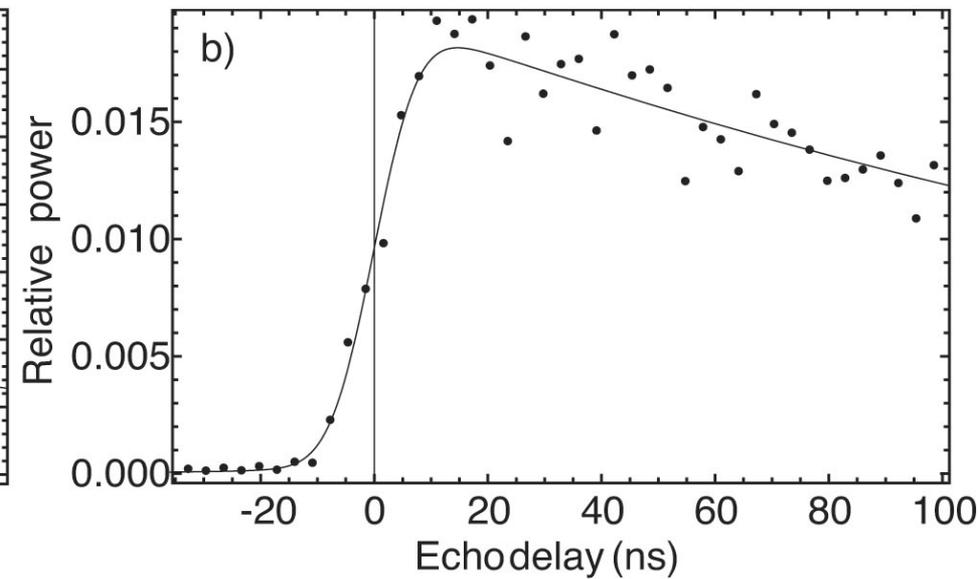

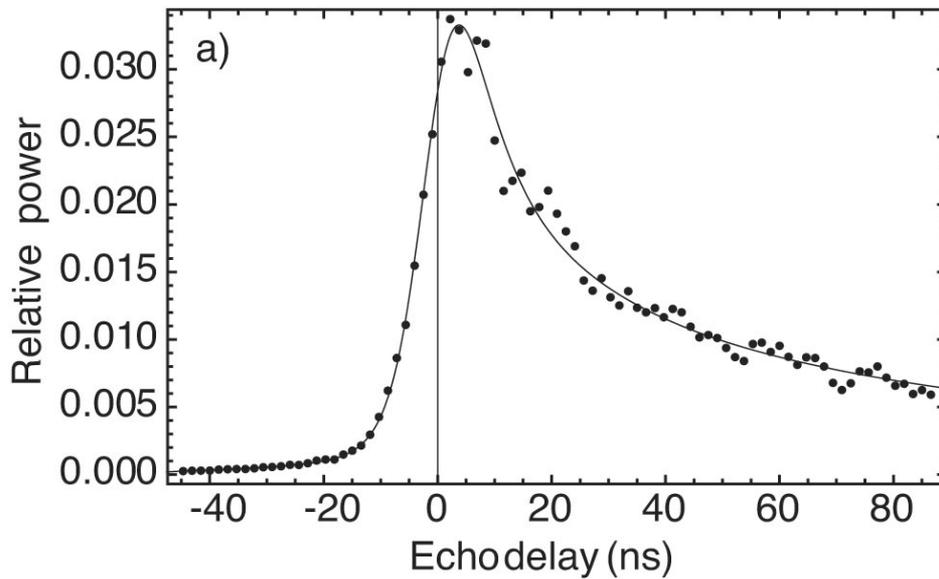

SAR mode correlations as a function of the look angle

PL correlations as a function of wave height 0, 2 and 4 m wave heights. The separation of the echoes is 0.41 m

Examples of the model fit to the data

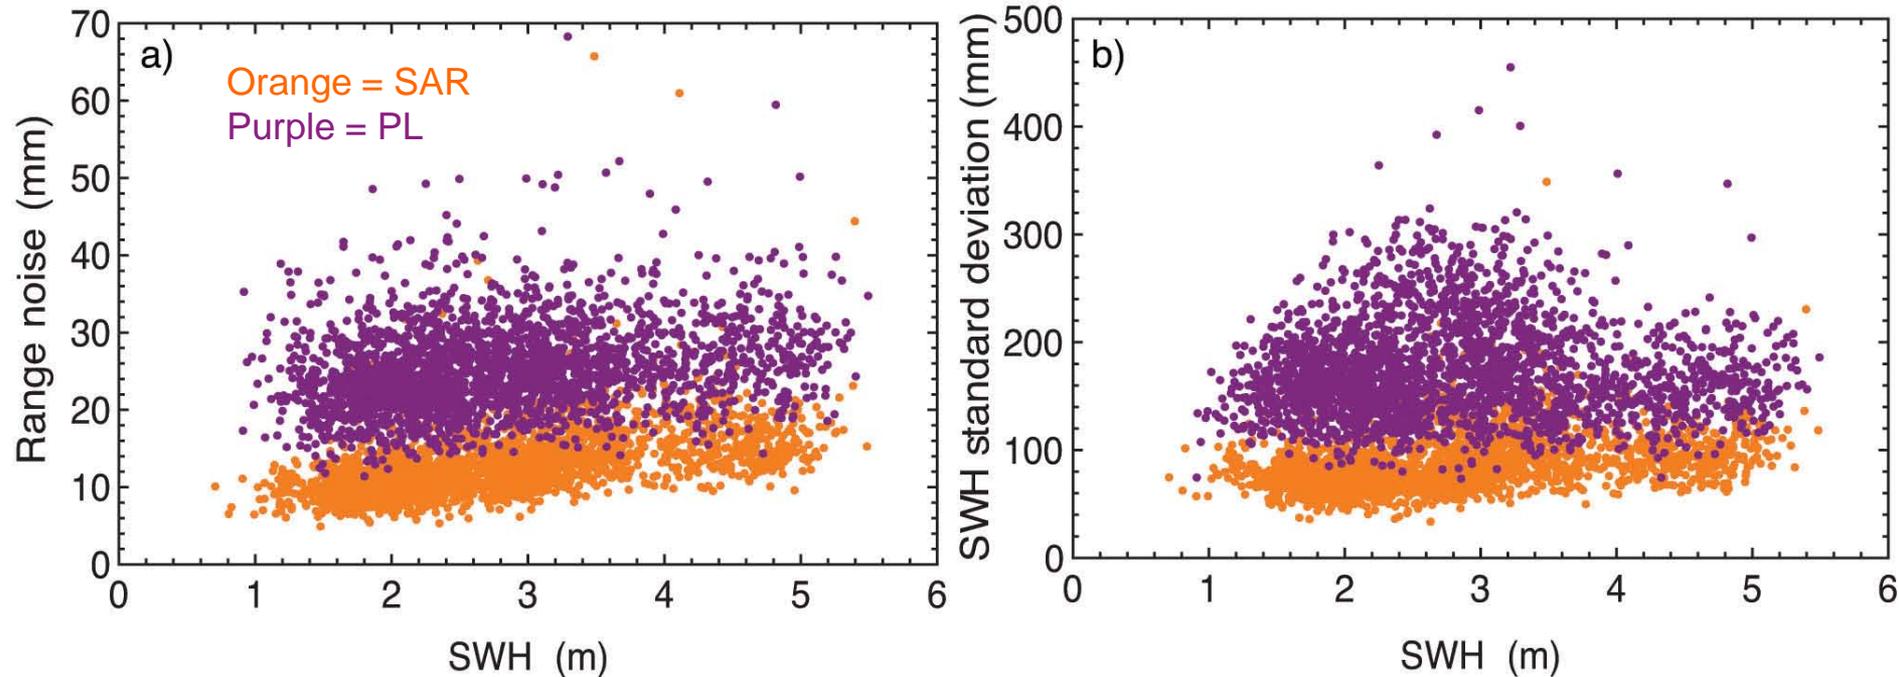

SAR

Pulse limited

Giles et al., in prep.

Results: Precision in the range and SWH

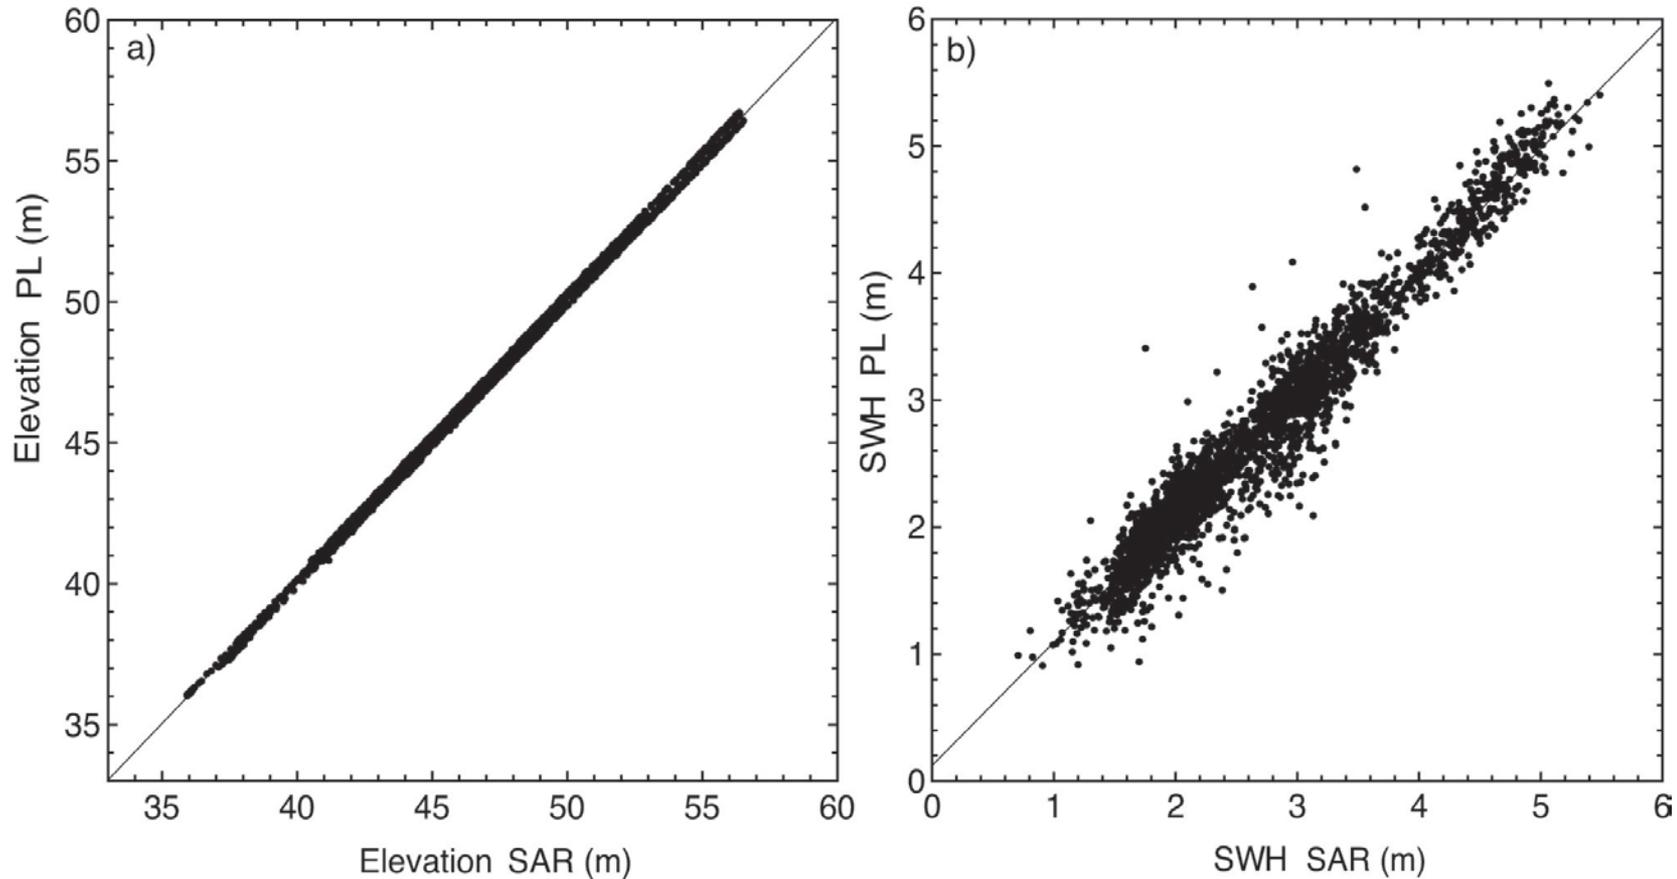

- SAR range noise at 1 Hz and SWH ~2 m is **1.1 cm**
- PL range noise at 1 Hz and SWH ~2 m is **2.3 cm**
- N.B. CryoSat LRM range noise is **1.3 cm** [Smith and Scharoo, OSTST 2011]

- SAR SWH noise at 1 Hz and SWH ~2 m is **7.5 cm**
- PL SWH noise at 1 Hz and SWH ~2 m is **17.0 cm**

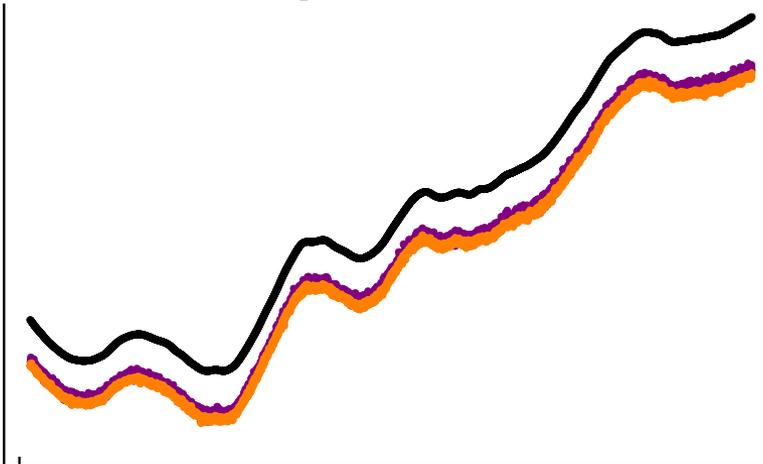

Giles et al., in prep.

Results: Comparison between modes

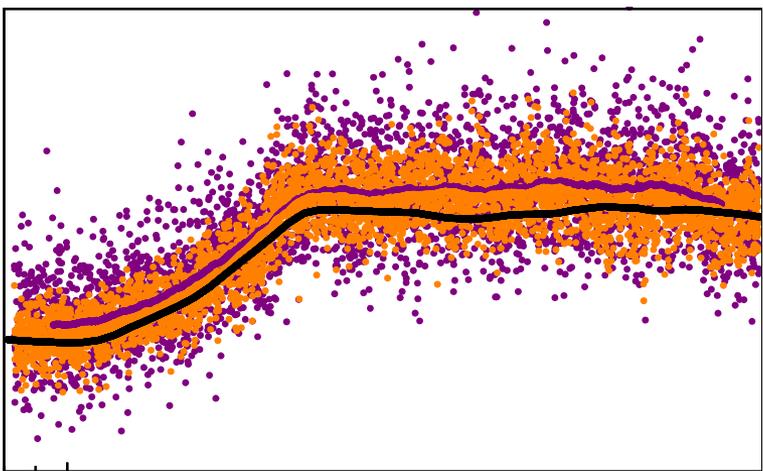

Regression of the a) elevation and b) SWH from the SAR and PL modes. The fit to the data in a) is given by $\text{Elevation}_{\text{PL}} = 1.002\text{Elevation}_{\text{SAR}} + 0.009$ and in b) by $\text{SWH}_{\text{PL}} = 0.931\text{SWH}_{\text{SAR}} + 0.349$. Including the pitch and roll brought the values closer together

Results: Comparison with the EGM08 geoid and SWH from ECMWF

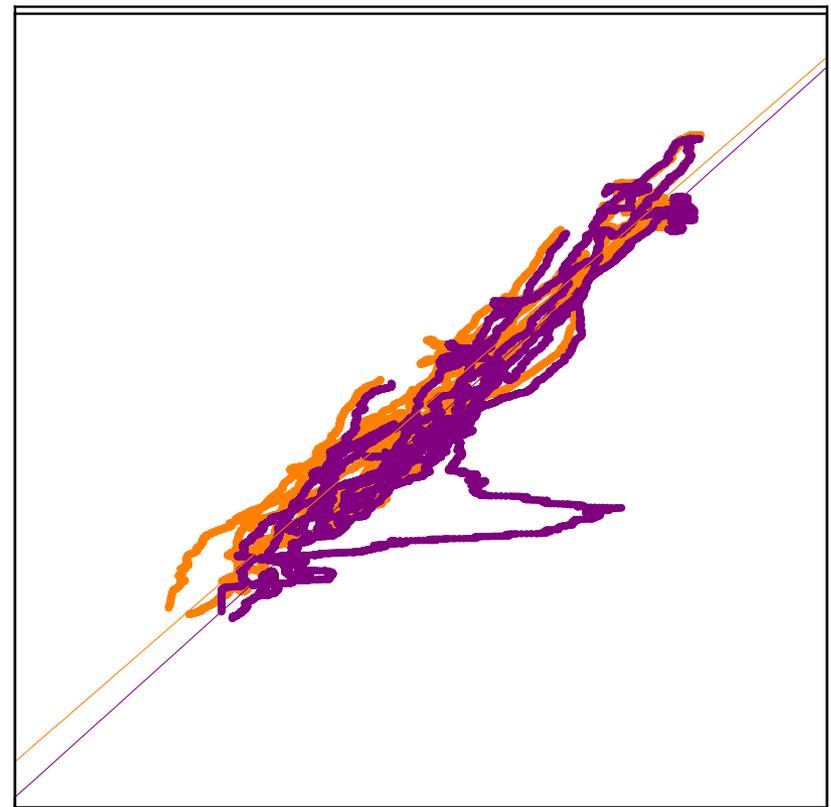

$ECMWF_SWH = 0.407244 + 0.872486 SAR_SWH$
 $ECMWF_SWH = 0.144844 + 0.903942 PL_SWH$

Orange) PL (purple) (m)

SWH data from Dr. Saleh Abdalla @ ECMWF

Results: Sigma-zero and wind speed from ECMWF

Sigma-zero was converted to wind speed using Abdalla's formula for Envisat [Abdalla (2007), Proc. 'Envisat Symposium 2007']

$$ECMWF_U10 = 1.07156 + 1.09271 PL_U10$$

PL U10 windspeed (m)

Wind speed data from Dr. Saleh Abdalla @ ECMWF

Conclusions

- We have directly compared the precision in the measurement of oceanographic parameters by re-tracking the data using a semi-analytical model.
- We have demonstrated that SAR processing can provide a two fold improvement to the precision compared to PL processing.
- The SAR mode precision of 1.1 cm is similar to the LRM precision of 1.3 cm found by Smith and Scharroo (OSTST 2011).
- The oceanographic parameters from CryoSat-2 compare well to the EGM08 geoid and data from ECMWF.
- There is a fixed offset in the sigma-zero estimates from our SAR data that may originate in the UCL SAR processing.
- For future missions, an approximate three fold improvement could be made on the precision achieved by CryoSat's SAR mode and is described by Raney (2012).
