

Observations of Nonlinear Mesoscale Eddies

SSH from the merged altimetry data (Ducet *et al.*, 2000, Chelton *et al.*, 2011b)

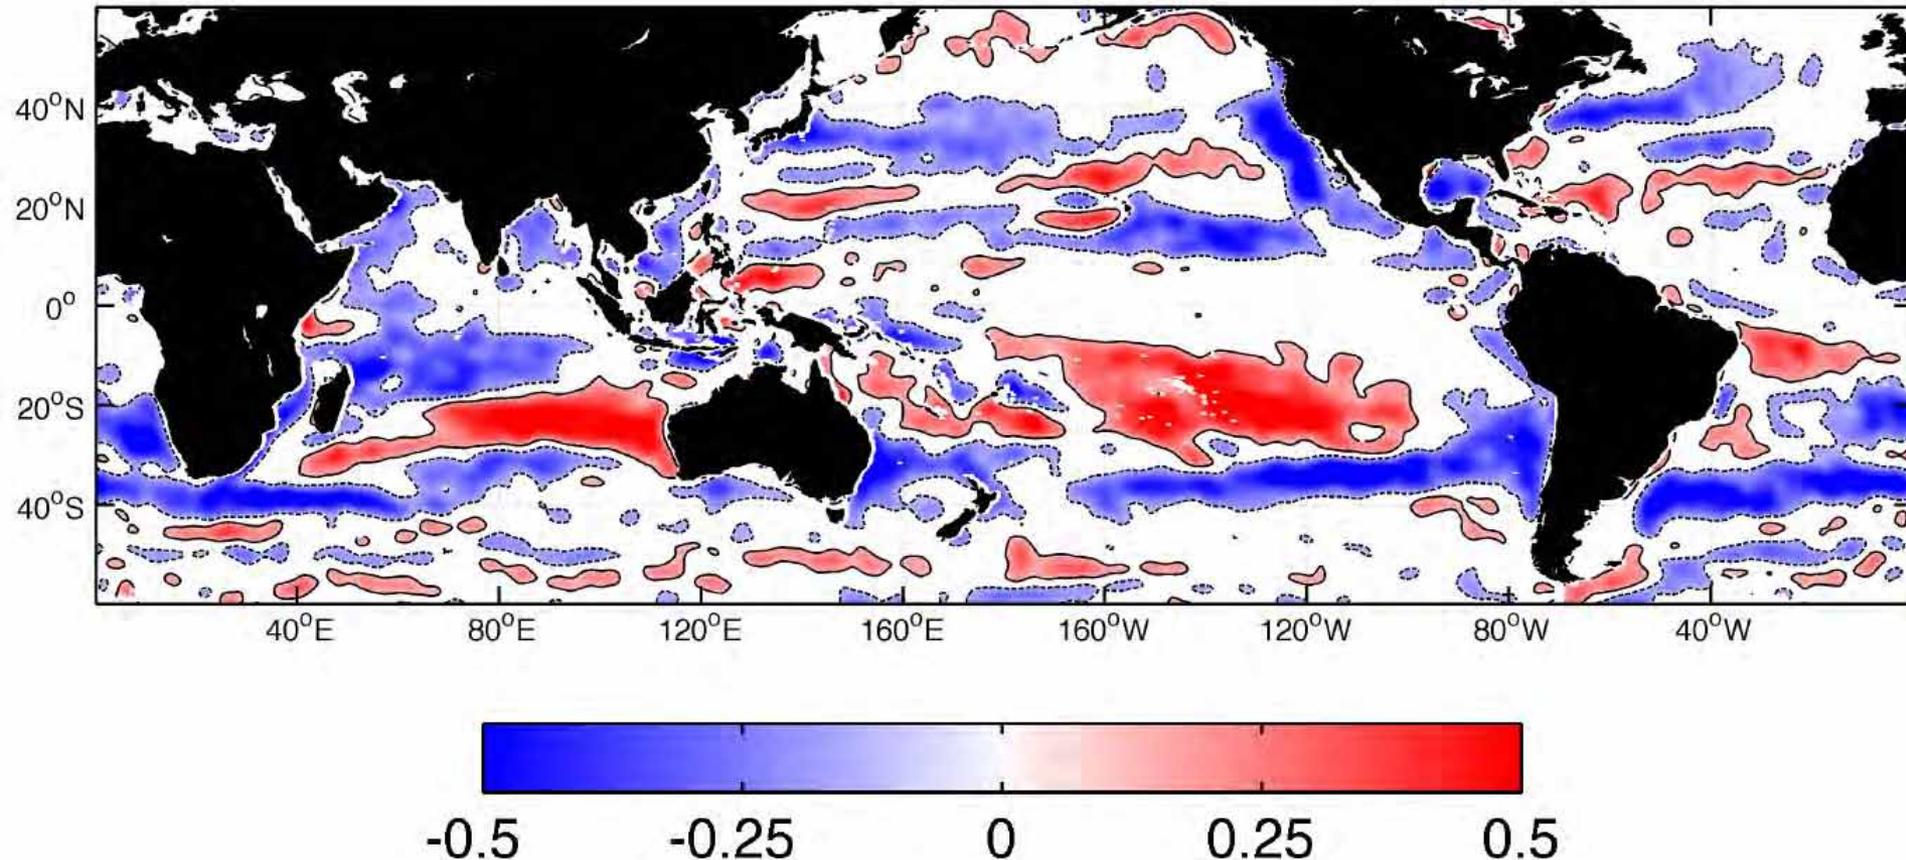

1992-10-14

Regional variations in the influence of mesoscale eddies on near-surface chlorophyll

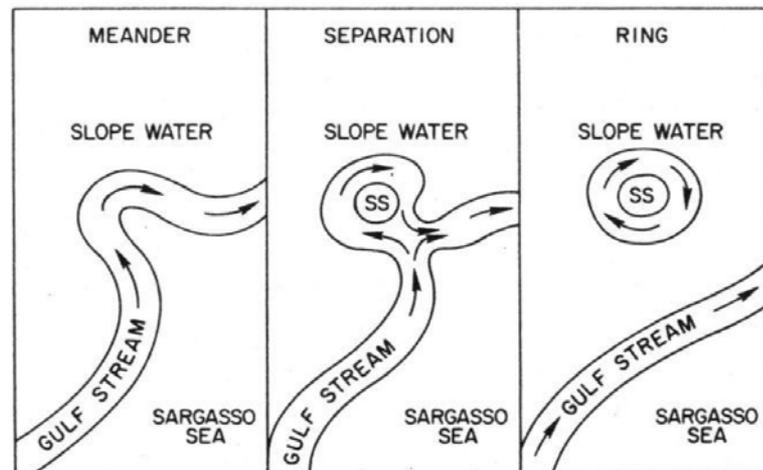

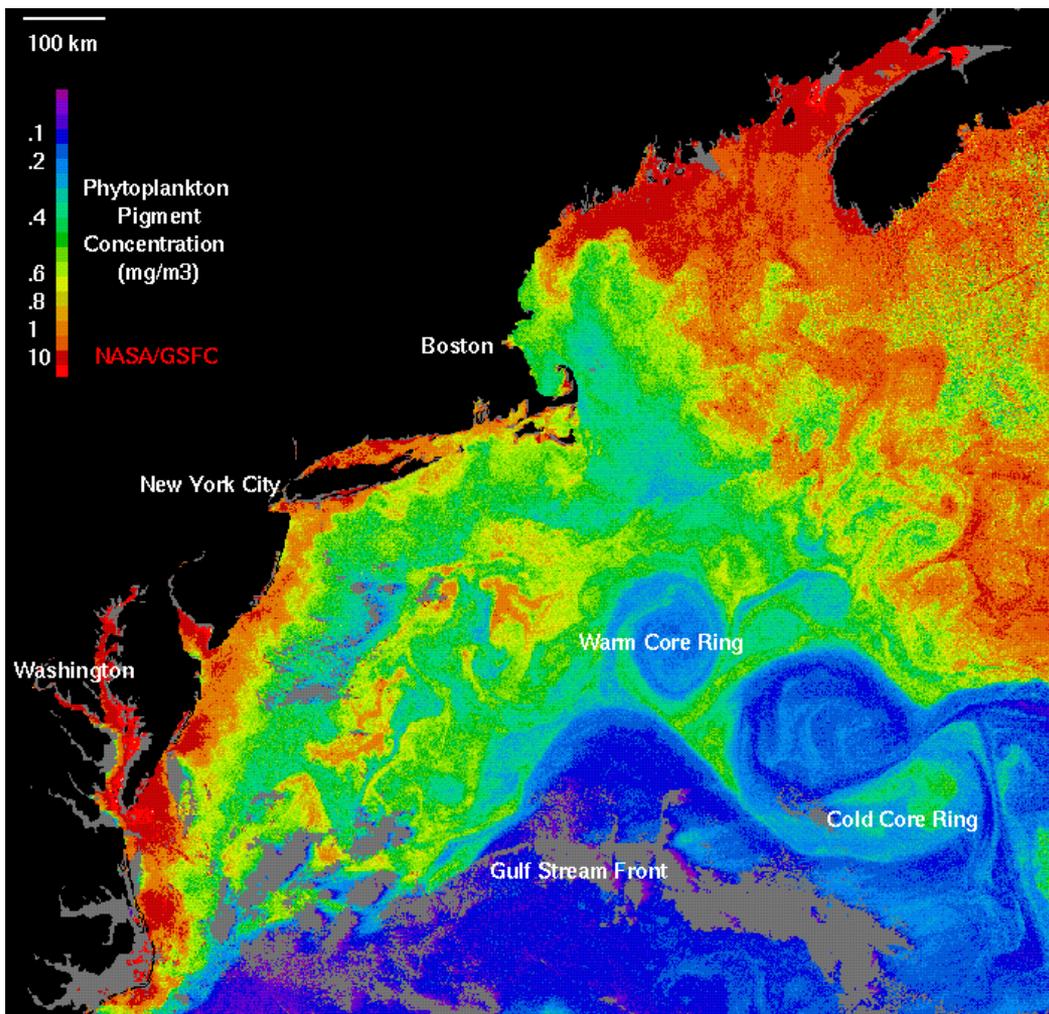

Peter Gaube, Dennis McGillicuddy, Dudley Chelton,
Michael Behrenfeld, Pete Strutton

Cross correlation of SSH and CHL anomalies $r_0(\text{SSH}, \text{CHL}')$

Mechanisms of mesoscale physical-biological interaction:

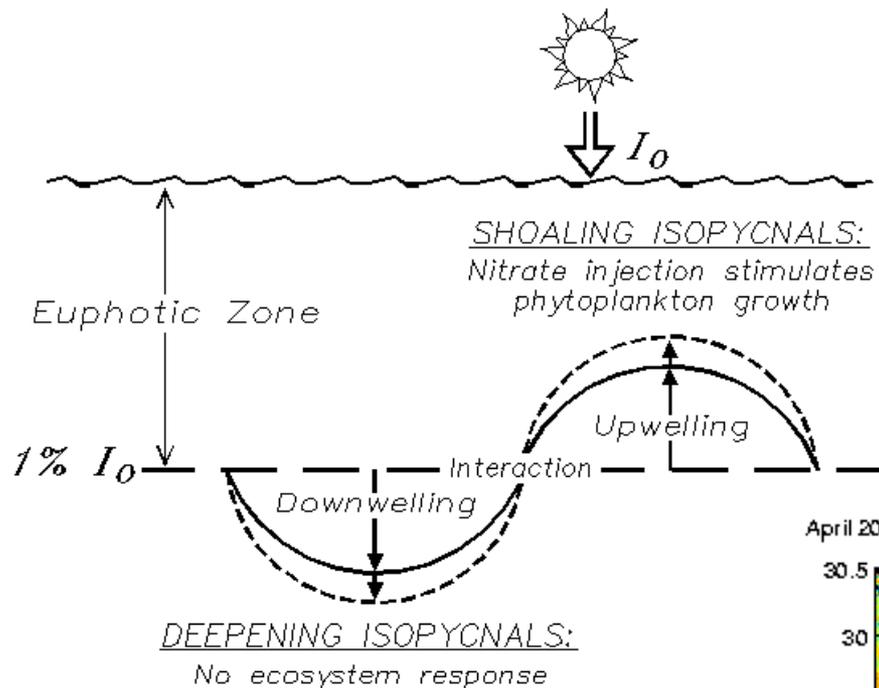

1. Trapped ecosystems

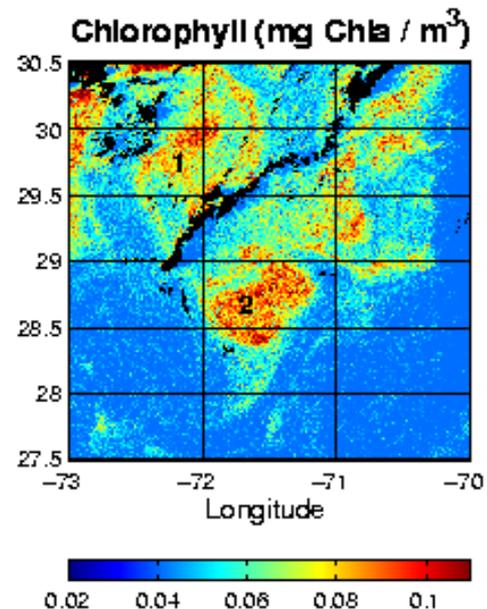

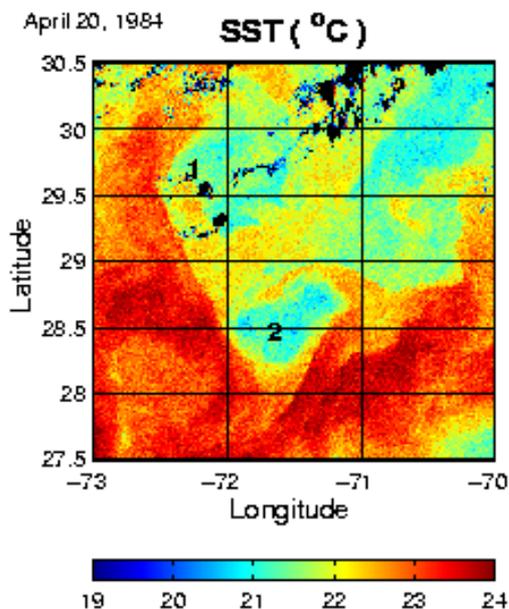

Warm Core Ring Executive Committee, 1982

Mechanisms of mesoscale physical-biological interaction:

2. Eddy formation / intensification

McGillicuddy and Robinson, 1997

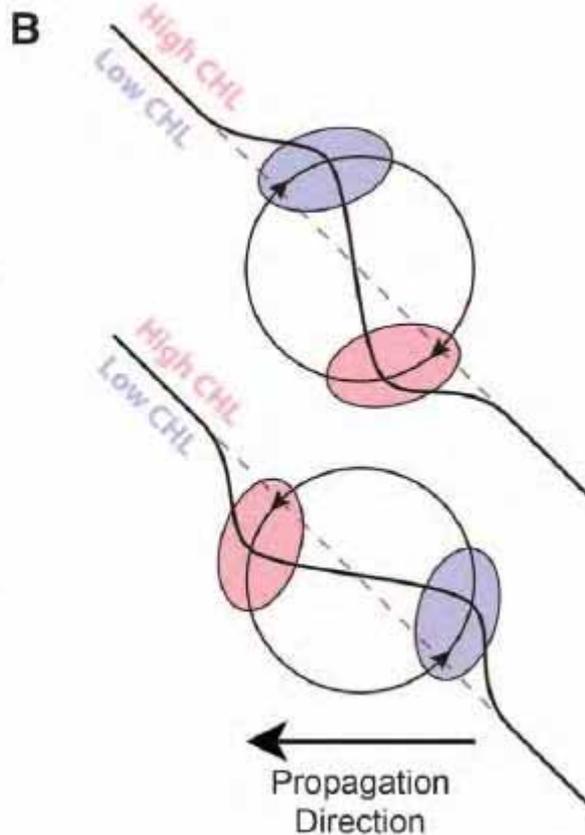

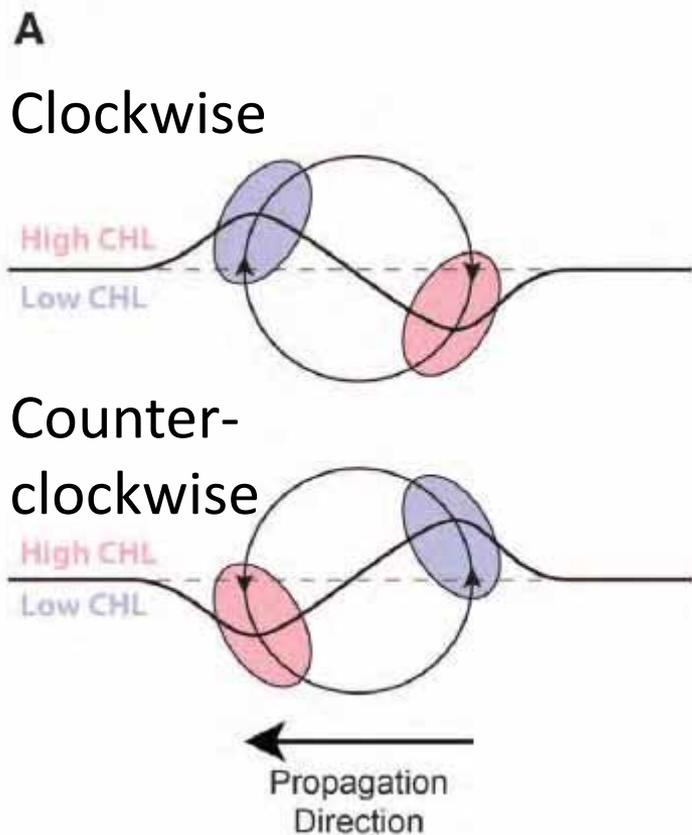

McGillicuddy et al., 2001

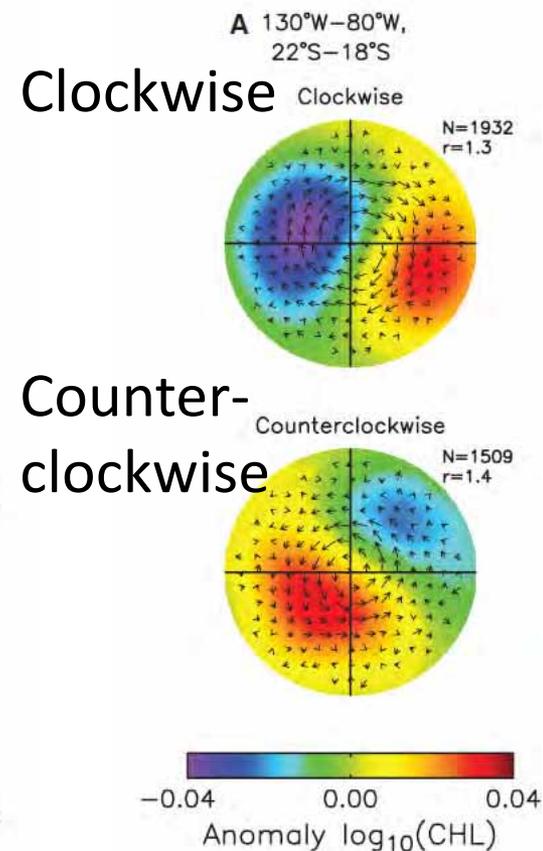

Mechanisms of mesoscale physical-biological interaction:

3. Eddy stirring

Theory

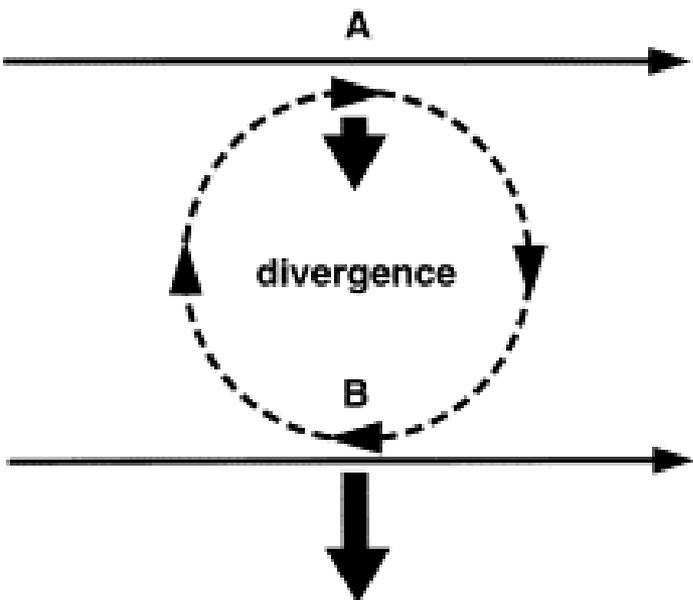

Observations

Mechanisms of mesoscale physical-biological interaction:

4. Eddy-induced Ekman pumping

Key:

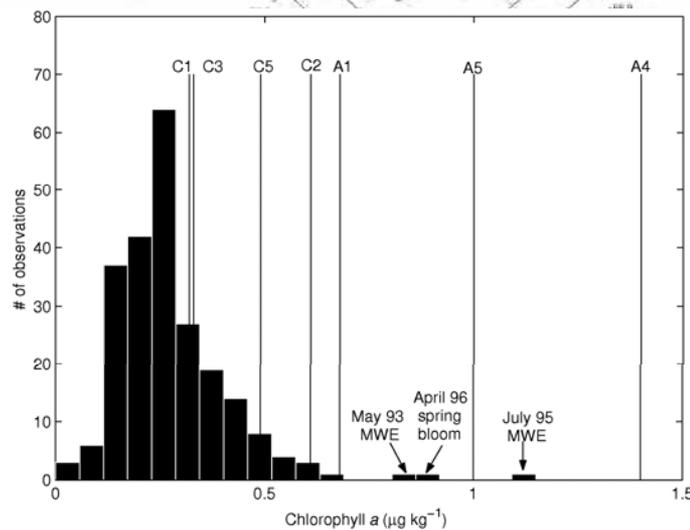

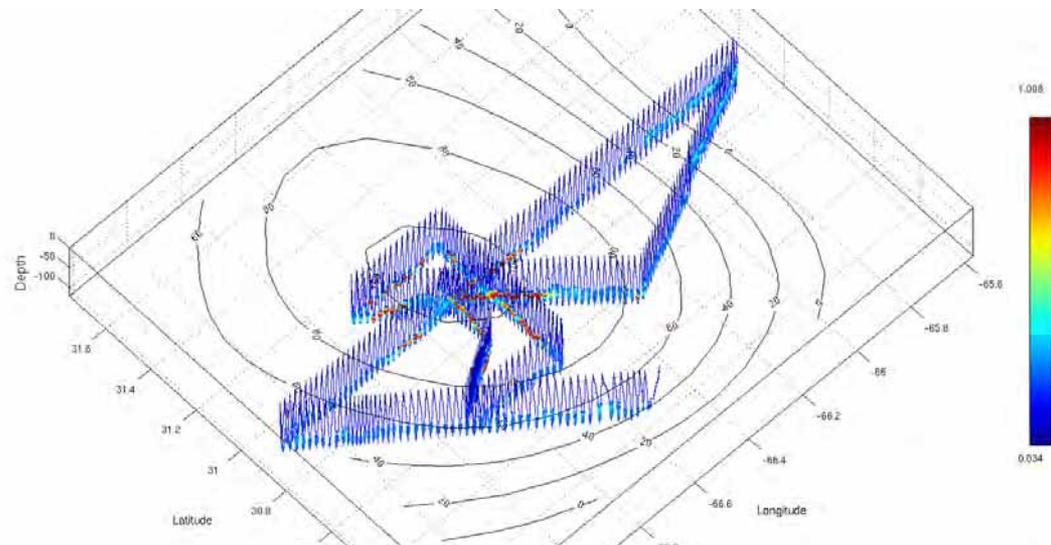

wind 

eddy current 

Ekman transport 

Dewar and Flierl, 1987

Martin and Richards, 2001

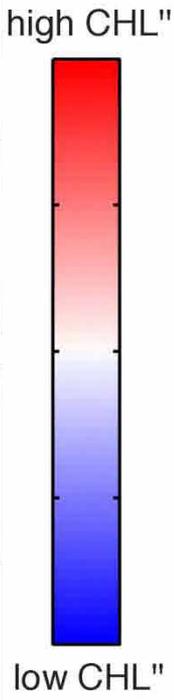

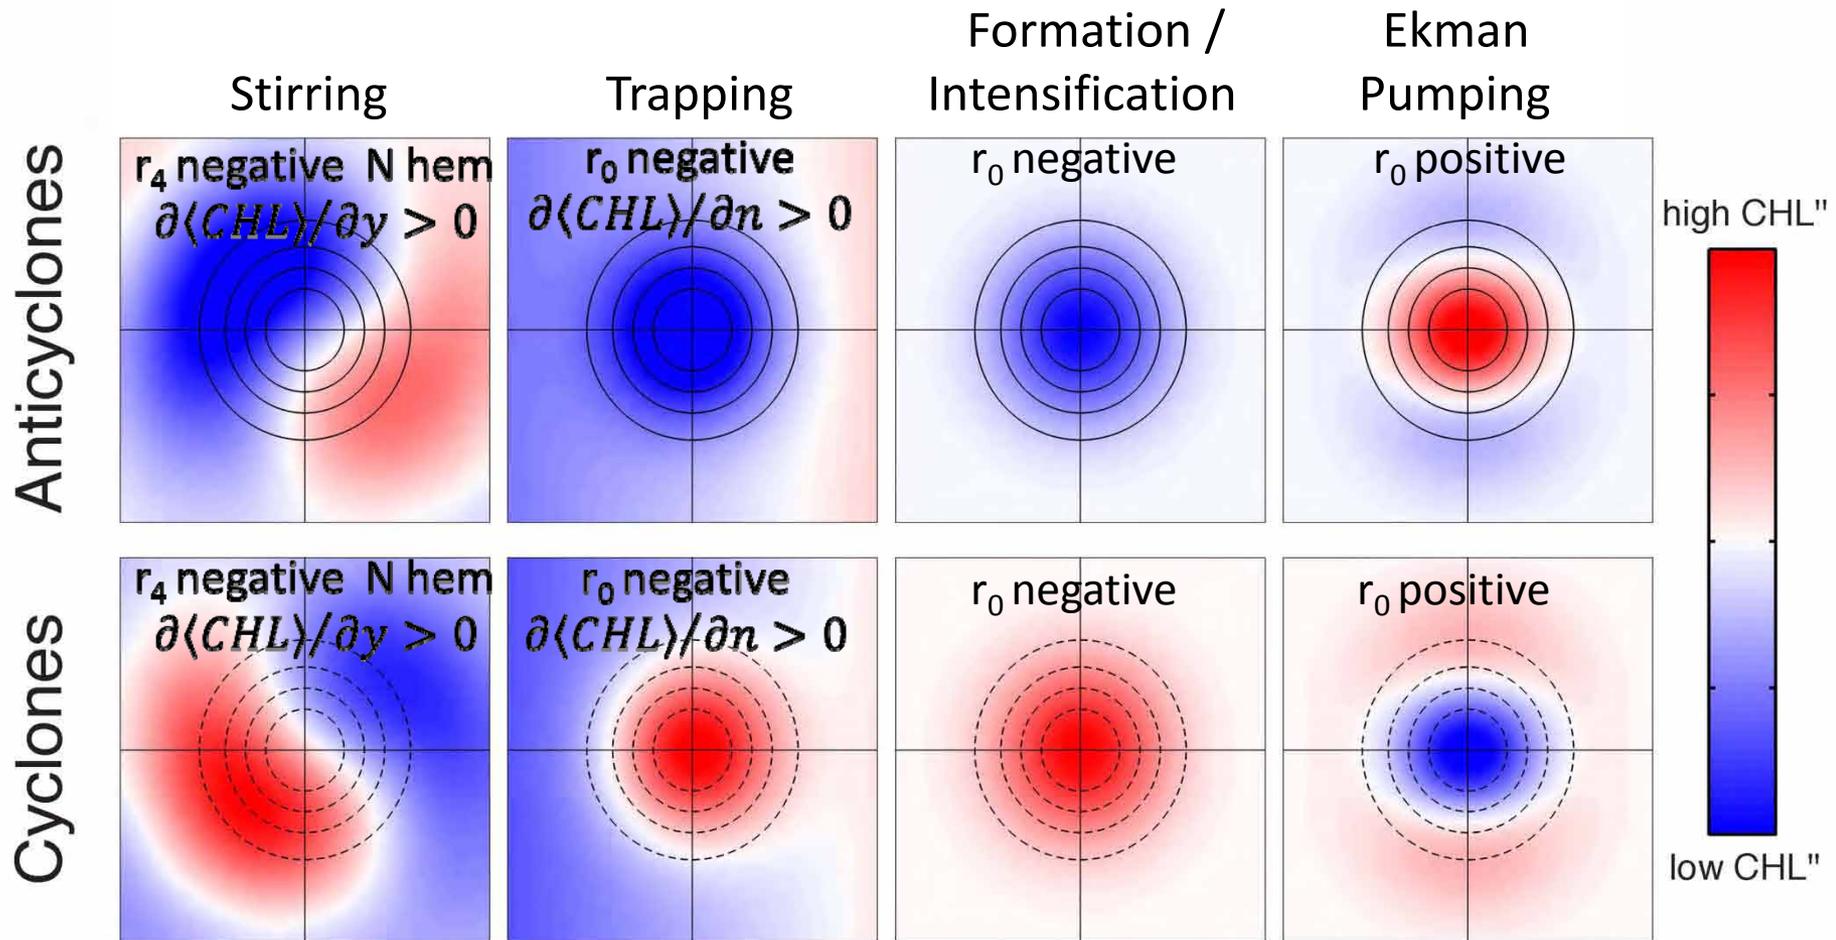

BATS Chl a 1988-2003

Fluorescence
 $\mu\text{g Chl } a \text{ L}^{-1}$

McGillicuddy et al., 2007

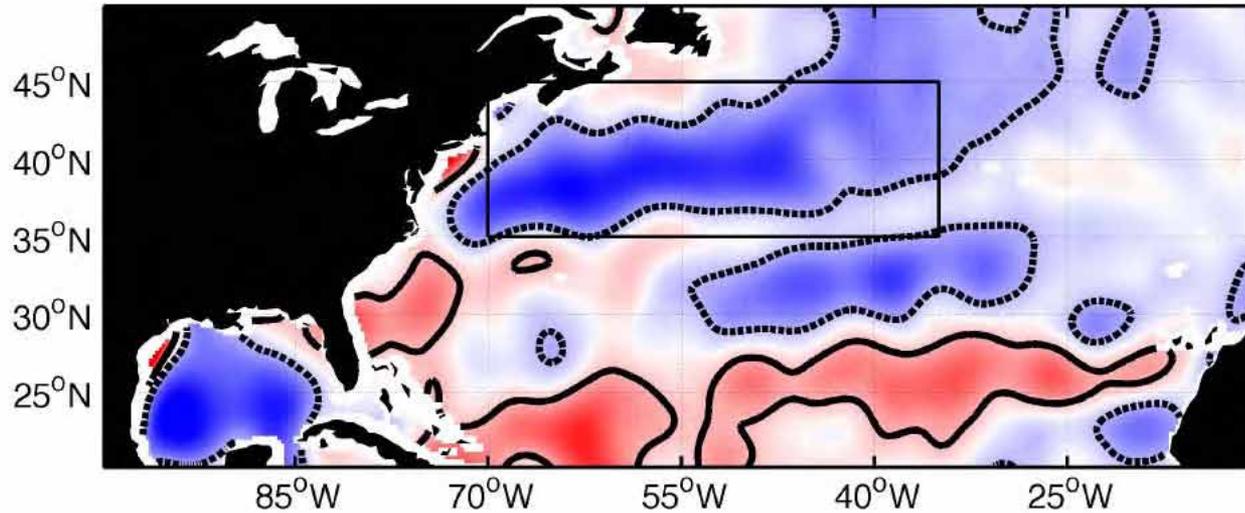

Manifestations of the four mechanisms in CHL and r_0 (SSH,CHL)

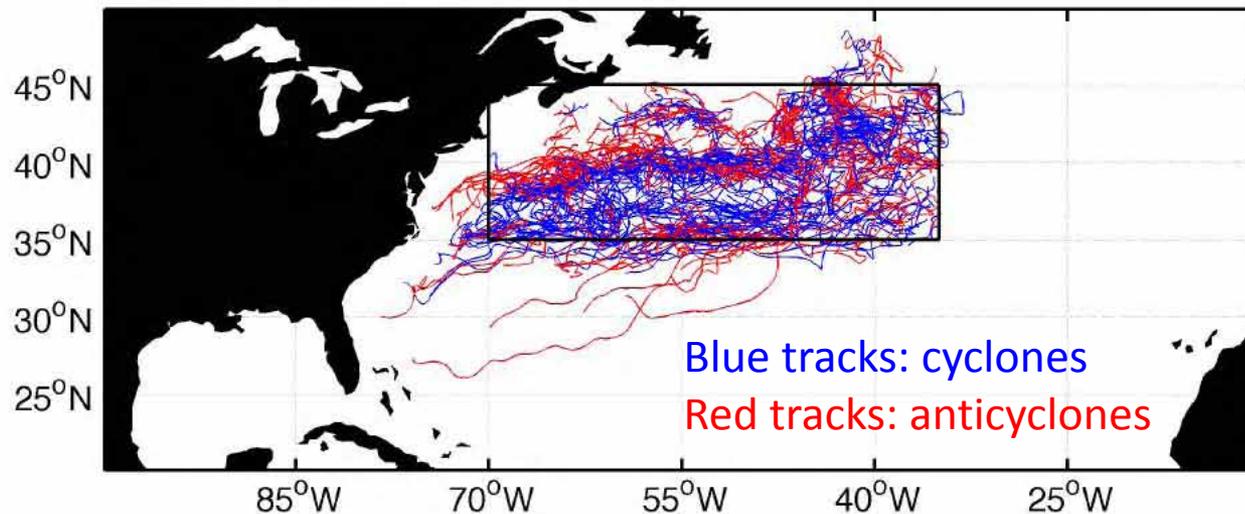

Positive SSH shown as solid contours, negative as dashed contours

Eddies of the Gulf Stream

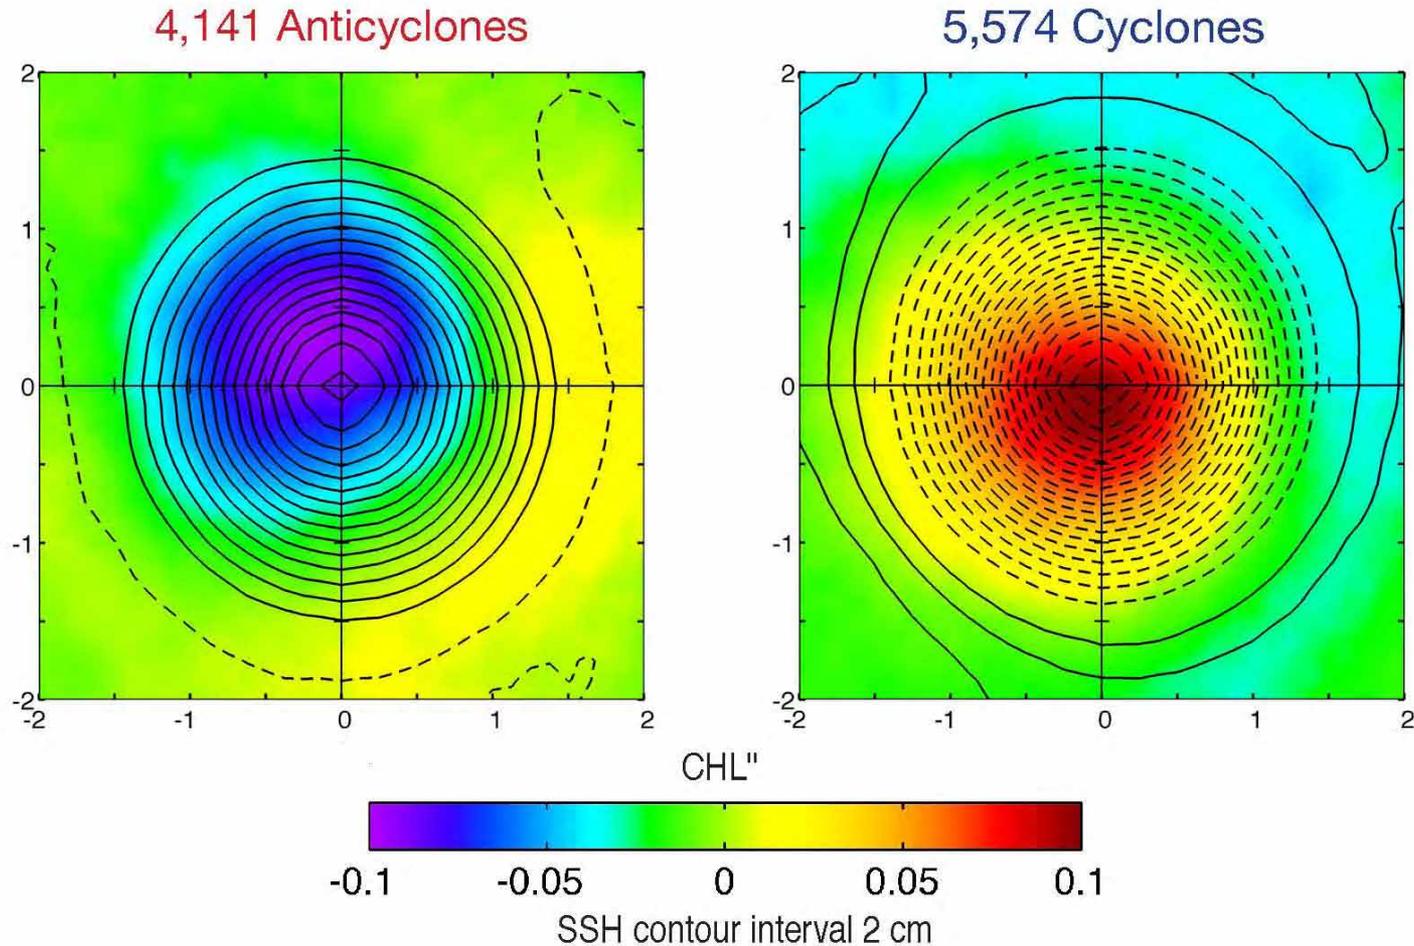

Cross correlation of SSH and CHL anomalies

Eddy Trajectories

Gulf Stream region: Eddy-centric composites of CHL''

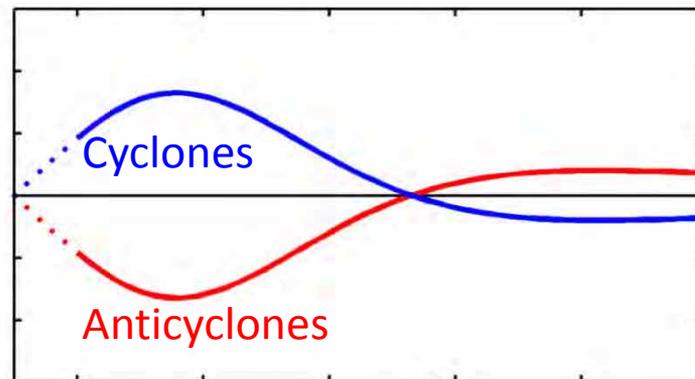

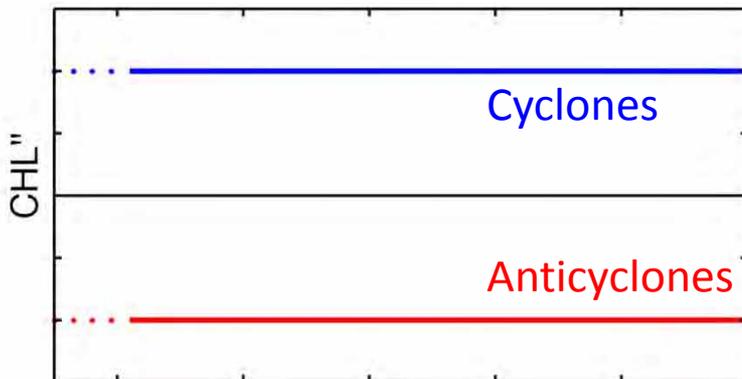

$r_0(\text{SSH}, \text{CHL}') \text{ negative: (1) trapping, (2) formation/intensification}$

Temporal evolution of CHL''

Trapping

Formation/Intensification

Theory

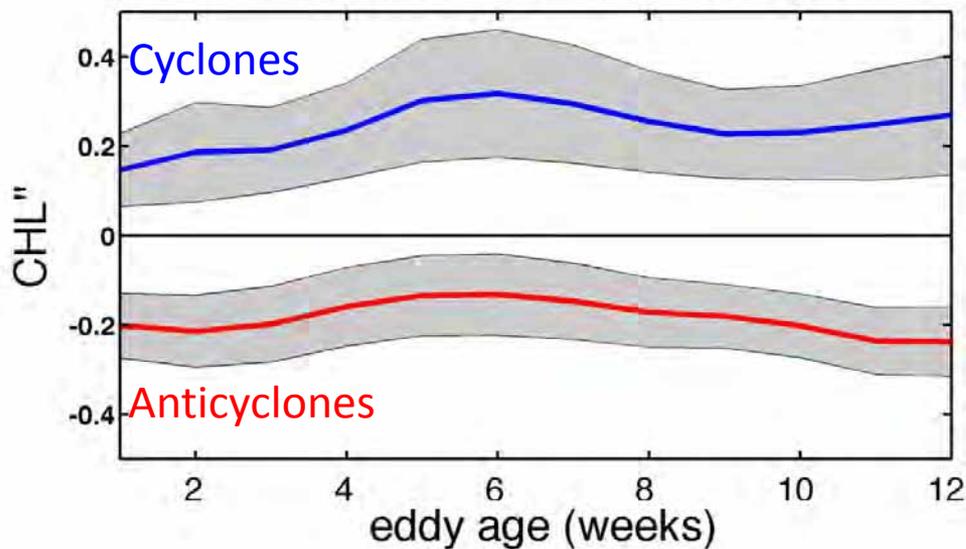

Time (arbitrary units)

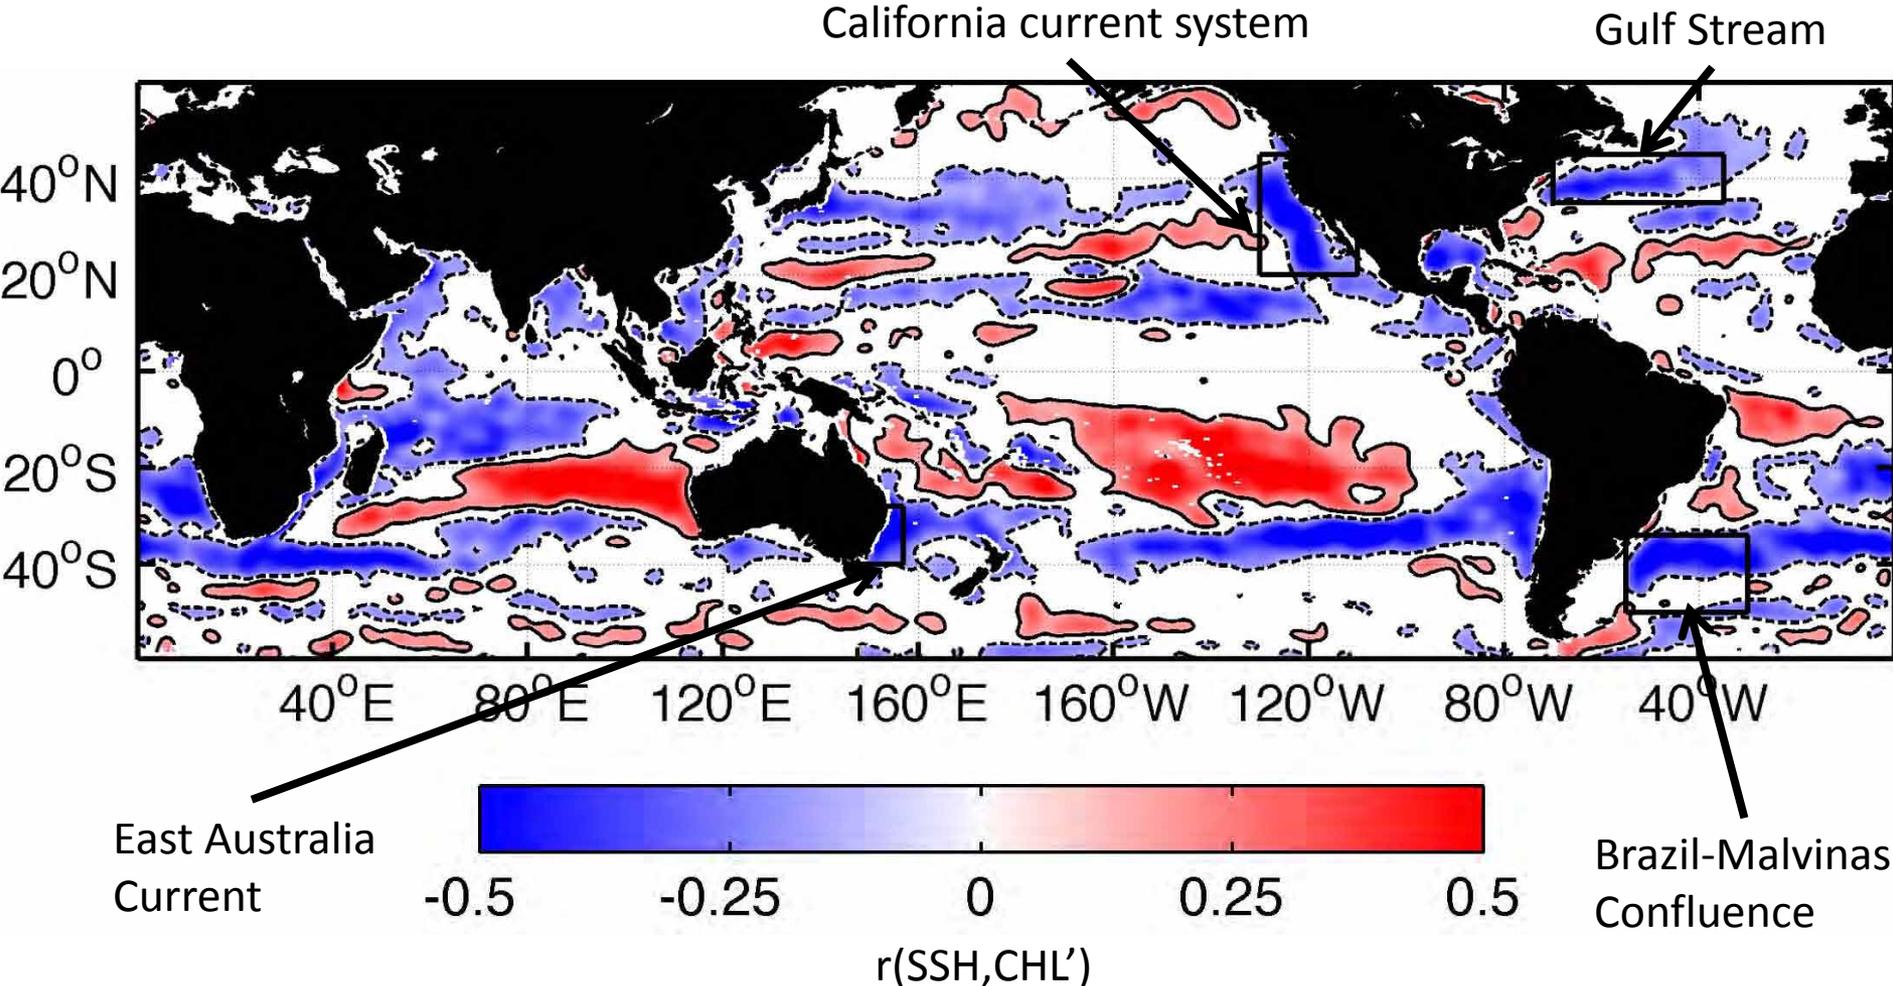

Time (arbitrary units)

CHL'' Time Series of Gulf Stream Eddies

Observation

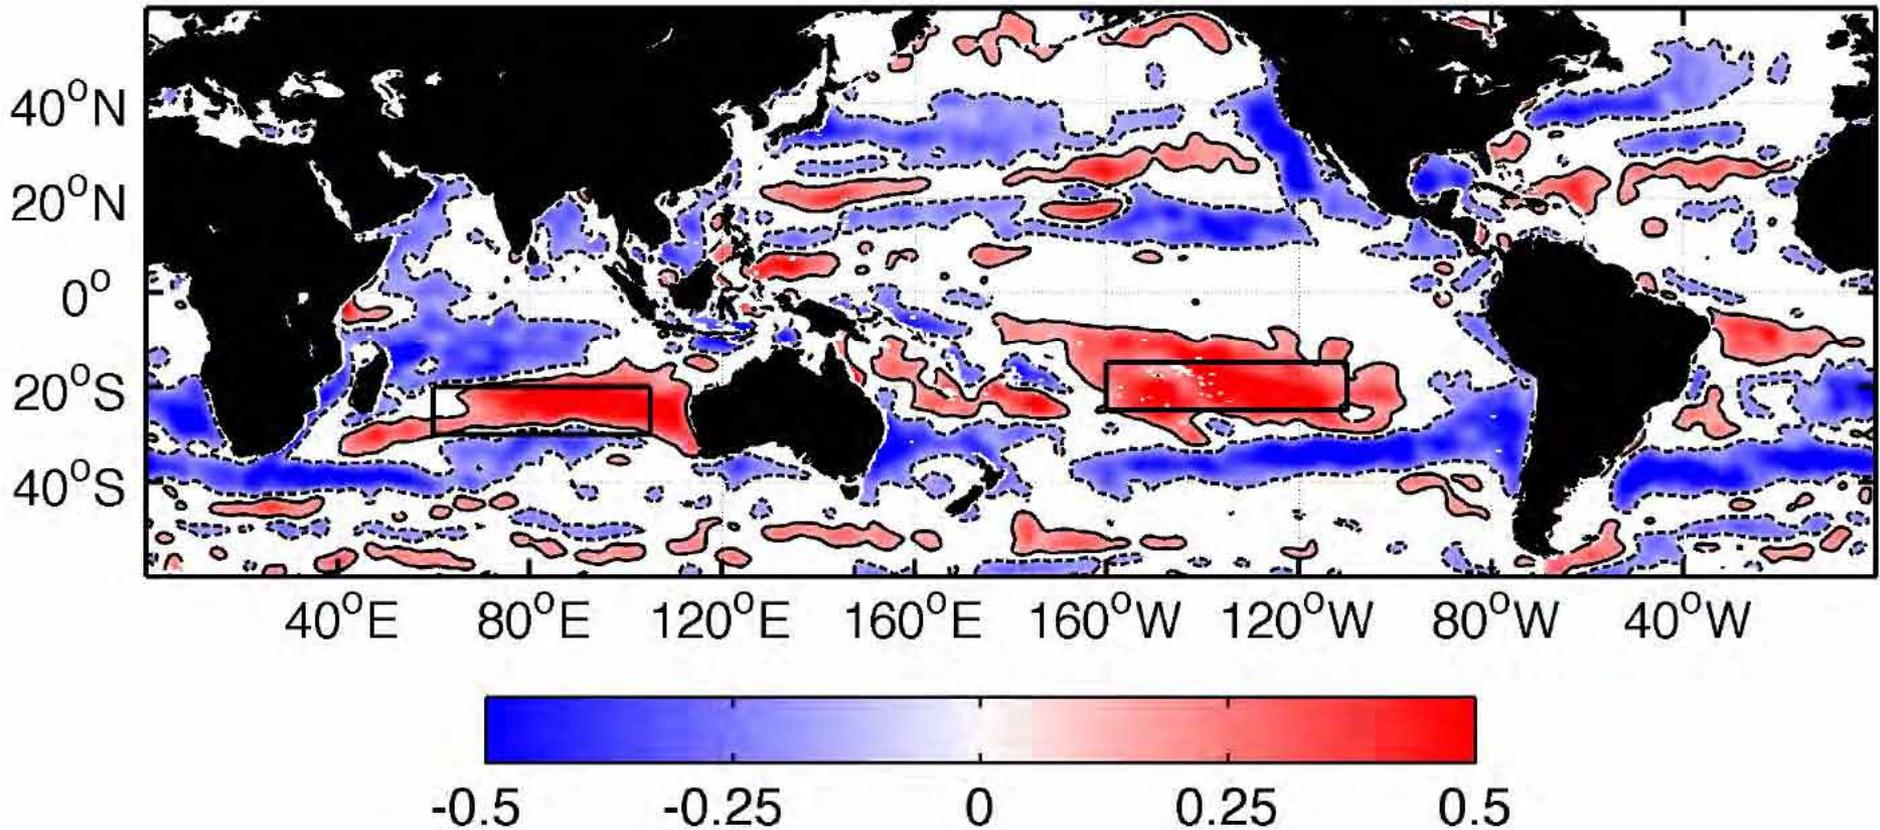

Negative correlation in boundary current systems: both trapping and formation/intensification are active

Regions of Positive Cross Correlation

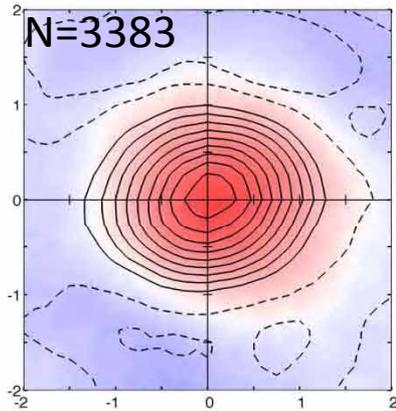

Cross correlation of SSH and CHL anomalies

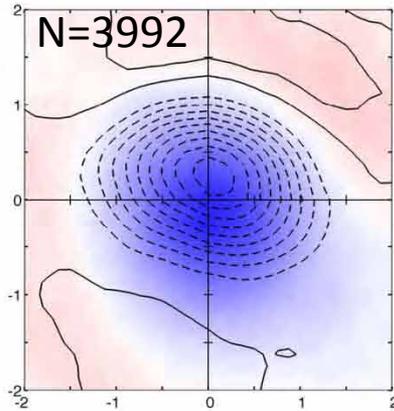

Eddy-centric composites reveal eddy-induced Ekman pumping

South Indian Ocean

Anticyclones

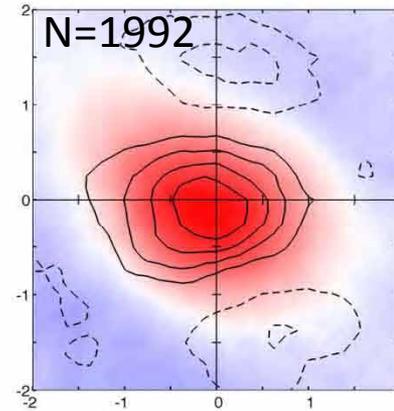

Cyclones

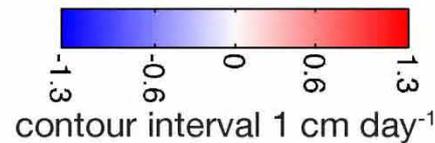

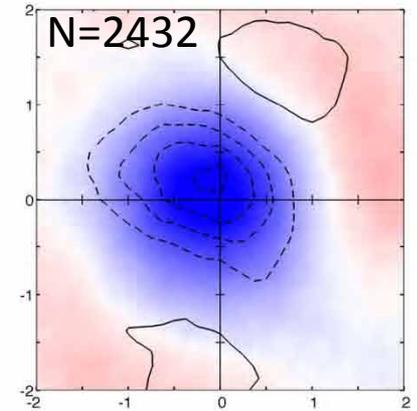

South Pacific Ocean

Anticyclones

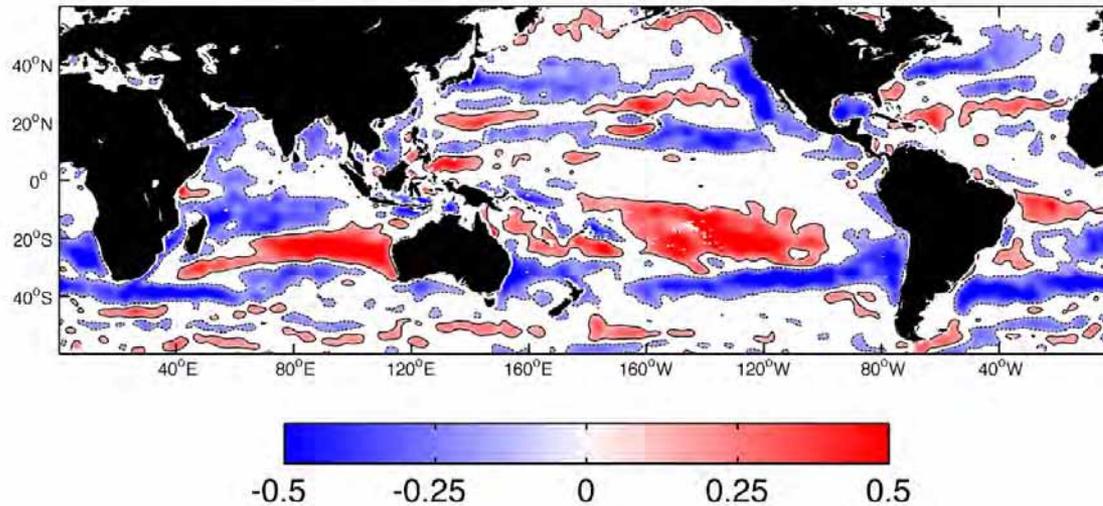

Cyclones

* wintertime only

Conclusions

Cross correlation of SSH and CHL anomalies

1. The influence of eddies on CHL varies regionally.
2. Multiple mechanisms can act simultaneously.
3. Resolution of the ambiguity among multiple mechanisms not possible with satellite observations alone.
4. Future OSTST research: combination of satellite data, *in situ* observations (Argo floats), and numerical models.
