Next Evolutions
Conclusions

COP Baseline C in few words

Major evolution when compared to COP Baseline B

Ocean Baseline-C brings several improvements, including netCDF format, the addition of SAR processing and the upgrade of key geo.l corrections.

PROCESSING

6 UPDATED
MODELS

NEW
PARAMETERS

ISSUES
FIXED

COP Baseline C data quality status

✧ The COP data quality remains very **good** showing improved space-time resolutions and better characterization of mesoscale and coastal dynamics

Mode-dependent biases are however observed and are under investigation (SSH: $\sim 1,5$ cm LRM/SAR, SWH: of ~ 5 to 10 cm between ASC & DSC passes, Sigma0: ~ 0.1 dB)

NOP (from the COP) **are also performing well** and even surpass quality of FDM.

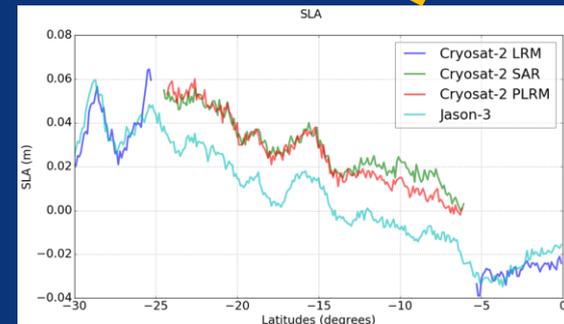

NOP **gaps** however observed and due to improper selection rule in the use of DOR_NAV. Issue to be fixed with the new EE CFI to be delivered to PDGS in June.

BANKS ET AL

WEBB ET AL

NAEJE ET AL

✧ Short and long term plan

Implementation of BUFR converter for NOP is on-going (ECMWF). Then, NOP will adequately replace the FDM which should be discontinued after Q3 2019 (TBC).

Baseline C COP reprocessing campaign (CNES) is on-going and should be finished on Q2 2020, no major issues (QC nominal up to 04-2013).

New Orbit Files (POE-F) will be used in operation. Possible – minor-bias with Reprocessed GOP (using POE-E) to be verified.

Mode-depend bias observed are under investigation and could be mitigated by using empirical correction (mid term) or by using SAMOSA DPM 2.5 (see results of CP40 project)

NRT L1/L2 PRODUCTS

CRYO-IDE	Description	SW Object	Verification goal	Test data used
IPF1-Cal-STR-related SPR to be implemented in Baseline D				
CRYO-IDE-223	Issue in L1b time increment	Spec. SAR/SARin IPF1	TBW	TBW2
CRYO-IDE-229	Spurious failure in the STR processor	STR Processor	TBW	TBW2
CRYO-IDE-232	Reprocessing Task 'IPF1_SARin' finished with exit code 128 but expected 0	Spec. SAR/SARin IPF1	TBW	TBW2
CRYO-IDE-241	Discrepancy in L1b and L2 Filename Validity Times	IPF1 and IPF2 Post Processor	TBW	TBW2
CRYO-IDE-243	Detation outside processing window due to out of range offset counter	L1b SAR/SARin Pre&Post	TBW	TBW2
CRYO-IDE-245	Memory issues in Specialized SAR/SARin IPF1	Spec. SAR/SARin IPF1	TBW	TBW2
CRYO-IDE-248	Error in writing function of CAL2 Flag in MCD	Spec. SAR/SARin IPF1	TBW	TBW2
CRYO-IDE-251	Problematic SIRISAR_FR files	IPF1 pre-processing	TBW	TBW2
CRYO-IDE-253	Unknown failure in Rep. Campaign	Spec. SAR/SARin IPF1	TBW	TBW2
CRYO-IDE-254	Time anomaly in last 55 in L1b product	Spec. SAR/SARin IPF1	TBW	TBW2
CRYO-IDE-271	FRB LRM Product remove from Inventory List	IPF1 LRM Task Table	TBW	TBW2
CRYO-IDE-272	Duplicated data in time_avg_01_ku and time_20_ku variables	Spec. SAR/SARin IPF1	TBW	TBW2
CRYO-IDE-273	Missing enif global attributes	IPF1 post-processing	TBW	TBW2
CRYO-IDE-274	Unexpected values for AGC ch 1	LRM IPF1	TBW	TBW2
CRYO-IDE-275	Interburst alignment	Spec. SAR/SARin IPF1	TBW	TBW2

CRYO-IDE	Description	SW Object	Verification goal	Test data used
IPF1-STR related Change Request (CHR) to be implemented in Baseline D				
CRYO-IDE-183	IPF1 not using SARin navigator path	FDM Task Table	TBW	TBW2
CRYO-IDE-214	Window Delay not referred to entire range of the waveforms	SAR/SARin IPF2	Specialized test. Baseline verification by inspection of report produced by MSS. Online execution is left as an option. First data crossing a satellite area can be processed.	TBW2
CRYO-IDE-221	FDM Wave Speed Bias	Spec. SAR/SARin IPF2	Not to be tested: 1stn was dropped from the schedule for Baseline D as the FDM is going to be decommissioned.	TBW2
CRYO-IDE-222	Define and optimize frequency for L2 NET SAR Production	L2 SAR Task Table	TBW	TBW2
CRYO-IDE-233	Reformat usage of NET L2 products in the ICE chain	STR Task Table	TBW	TBW2
CRYO-IDE-240	IPF1 preprocessor issue processing SIRISAR_FR	IP2 Preprocessor	TBW	TBW2
CRYO-IDE-247	Form Corrupting Customer rate vector	IPF2 QDR	TBW	TBW2
CRYO-IDE-258	Not honorably increase of time stamp at NetCDF conversion	LRM/SARin IPF2 pre-QDR	Not to be tested: expected to be solved by CRYO-IDE-254	TBW2
CRYO-IDE-276	SAR Sea Ice Concentration	IPF2 SAR	Specialized test. Baseline verification by inspection of report produced by MSS. Online execution is left as an option with some other products.	TBW2
CRYO-IDE-277	Duplicated data in time_avg_01_ku and time_20_ku variables	IPF2	Specialized test. Verification by inspection of report produced by MSS.	TBW2
CRYO-IDE-278	Missing enif global attributes	IPF2	Specialized test. Verification by inspection of report produced by MSS.	TBW2
CRYO-IDE-279	Unexpected values for AGC ch 1	LRM IPF2	TBW	TBW2
CRYO-IDE-280	Interburst alignment	Spec. SAR/SARin IPF2	TBW	TBW2

CRYO-IDE	Description	SW Object	Verification goal	Test data used
IPF1-Cal-STR-related Change Request (CHR) to be implemented in Baseline D				
CRYO-IDE-269	Link between 1Hz and 20 Hz measurements	IPF1 (and IPF2, same issue)	TBW	TBW2
CRYO-IDE-270	Decommissioning of FDM production	IPF1	TBW	TBW2
CRYO-IDE-271	spike correction in CAL2IN products	CAL2 Processor	TBW	TBW2
CRYO-IDE-235	STR File Format Change	STR Processor	TBW	TBW2
CRYO-IDE-238	USO frequency correction on window delay	Spec. LRM/SAR/SARin IPF2	TBW	TBW2
CRYO-IDE-244	Inconsistency between L1b 1Hz waveform and L2 100 flagset	Spec. SAR/SARin IPF1	TBW	TBW2
CRYO-IDE-245	Prob estimation from CryoSat data in L1b Product (Baseline D)	Spec. SAR/SARin IPF1	TBW	TBW2
CRYO-IDE-252	Change the ECDF flag for aberration correction to Reverse and Update attitude biases	STR Processor	TBW	TBW2
CRYO-IDE-253	Peakiness of Stack in BBP & SAR sea-ice new discrimination	Spec. SAR/SARin IPF1/IPF2	TBW	TBW2
CRYO-IDE-260	SARin LRM/SAR path delay - bias / Trend/Noise	CAL_ path Delay	TBW	TBW2
CRYO-IDE-263	Switch to NetCDF Format	IPF2 and IPF2	TBW	TBW2
CRYO-IDE-262	STR Process with aux file for varying impinging angle biases	STR Processor	Not to be tested: solved by CRYO-IDE-252	TBW2
CRYO-IDE-266	Improved information on surface characteristics	IPF2 and IPF2	TBW	TBW2
CRYO-IDE-281	SARin power scaling issue in multilooking	Spec. SAR/SARin IPF1/IPF2	TBW	TBW2
CRYO-IDE-282	CAL4 not applied to the first 19 bursts in SARin LRM1 processing - (SSB) to be opened by USA on ARTS	Spec. SAR/SARin IPF1/IPF2	TBW	TBW2

CRYO-IDE	Description	SW Object	Verification goal	Test data used
IPF2-related Change Request (CHR) to be implemented in Baseline D				
CRYO-IDE-269	Link between 1Hz and 20 Hz measurements	IPF2 (and IPF1, same issue)	TBW	TBW2
CRYO-IDE-312	New Snow Depth correction dedicated to sea ice areas and land sea-ice areas	LRM/SAR/SARin IPF2	Not to be tested: this was investigated by MSS during the development process, and no method was available for implementation. It isn't expected as part of this delivery.	TBW2
CRYO-IDE-216	Freeboard computation in SARin sea-ice area	Spec. SAR/SARin IPF2	Specialized test. Baseline verification by inspection of report produced by MSS. Online execution is left as an option. SARin data crossing the Wingham box in the arctic can be processed.	TBW2
CRYO-IDE-212	New improved Slope Correction (DEM for LRM & Ice Banks, Icein, SRB1 & other ?)	LRM /SARin IPF2	Specialized test. Verification by inspection of report produced by MSS.	TBW2
CRYO-IDE-219	USO frequency correction on window delay	Spec. LRM/SAR/SARin IPF1	Specialized test. To be tested in an CE++.	TBW2
CRYO-IDE-251	Switch to NetCDF format	IPF1 and IPF2	TBW	TBW2
CRYO-IDE-264	Final improve of the existing Baseline C retriever over sea-ice (Arctic + Antarctic) and Land Ice	Spec. LRM/SAR/SARin IPF2	Specialized test. Verification by inspection of report produced by MSS. The improvements were found for the land ice retriever, so nothing has changed (but the slope model will improve land results).	TBW2
CRYO-IDE-265	Finalize of Stack in BBP & SAR sea-ice new discrimination	Spec. SAR/SARin IPF1/IPF2	Specialized test. Verification by inspection of report produced by MSS.	TBW2
CRYO-IDE-266	Improved information on surface characteristics	IPF2	Specialized test. To be tested in an CE++.	TBW2
CRYO-IDE-264	Finalize of Stack in BBP & SAR sea-ice new discrimination	IPF2	Specialized test. Verification by inspection of report produced by MSS.	TBW2
CRYO-IDE-266	Improved information on surface characteristics	IPF1 and IPF2	TBW	TBW2

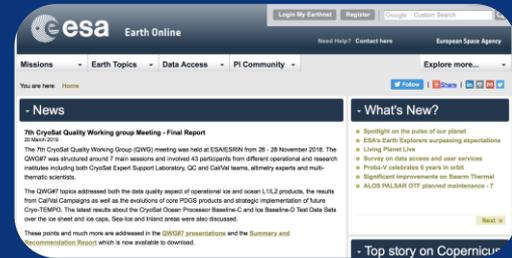

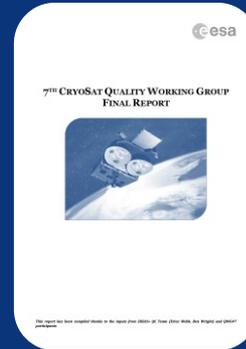

Area previously operating in SARin with no freeboard

6 MONTH TDS GENERATED AND MADE AVAILABLE TO EXPERTS FOR IN-DEPTH QCV

Ice Baseline D data quality

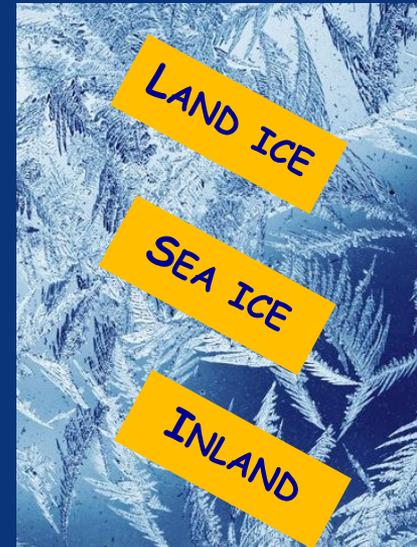

✧ Results presented at **CryoSat QWG#7 Meeting** and summarize in Final Report. (see next **Marco Talk + Future Paper**)

SARIn elevations show slight improvement (**roll angle issue fixed**), whilst LRM is similar. The new **surface type mask** and **slope model** around Antarctica also shows better results.

SARIn freeboard now computed and SAR freeboard computation **refined** (less noisy & no more overestimated).

Baseline-D shows welcome improvements with a **large increase of valid observations** and large **biases removed**

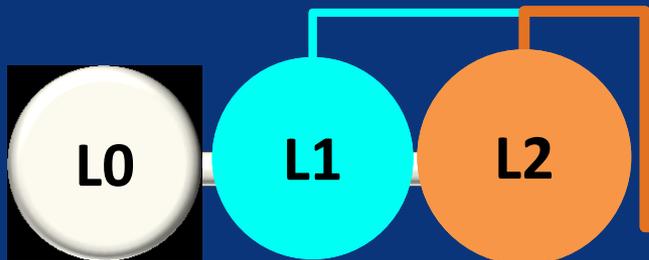

QWG ENDORSED THE IMPLEMENTATION OF BASELINE-D INTO OPERATIONS

Next Evolutions
Conclusions

- The quality of CryoSat ice and ocean data is **excellent** and allows to fully achieve the mission objectives and much more ...
- Ice **Baseline D TTO** is scheduled on 27/05/19, will include significant improvements (fmt + algo) and **NRT capability** for SAR & SARin
- Next step: Develop **Simplified** and **Rapidly** evolving **CryoTEMPO** which will including **quality index** and target **larger science community**

An aerial photograph of a dry, cracked lake bed. The ground is a mix of light and dark greyish-brown, with a complex network of dark, irregular cracks forming a mosaic-like pattern. A solid blue banner with a pointed right edge is centered horizontally across the middle of the image. The text "Thank you for your attention" is written in white, bold, sans-serif font on the banner.

Thank you for your attention
