1 General description

- Figures and notes have been included in this report to evaluate different altimetry products.
- In order to test different version of the Range used to calculate the sea level anomaly. Each version has been compared with a reference version. In this case the Mle4 is the reference one.
- The sea level anomaly has been calculated using each version of the variable and has been compared to the sea level anomaly calculated using the reference version.
- The region of study is global
- Mission : J3
- Git last tag :
- Git changeset number : 3b970d7-2022-07-05

2 Processing

2.1 sla formula

2.1.1 Mle4 product ' sla

```

sla = ORBIT.ALTI.CNES_POE_F -
      RANGE.ALTI -
      MEAN_SEA_SURFACE.MODEL.CNESCLS15 -
      SEA_STATE_BIAS.ALTI -
      IONOSPHERIC_CORRECTION.MODEL.GIM -
      WET_TROPOSPHERIC_CORRECTION.RAD -
      DRY_TROPOSPHERIC_CORRECTION.MODEL.ECMWF -
      DYNAMICAL_ATMOSPHERIC_CORRECTION.MODEL.MOG2D_HR -
      OCEAN_TIDE_HEIGHT.MODEL.FES14B -
      SOLID_EARTH_TIDE_HEIGHT.MODEL.CARTWRIGHT_TAYLER_71 -
      POLE_TIDE_HEIGHT.MODEL.DESAI_2015
  
```

2.1.2 Adaptive product 'sla

```
sla = ORBIT.ALTI.CNES_POE_F -  
      RANGE.ALTI.RTK_ADAPTIVE_PROTO -  
      MEAN_SEA_SURFACE.MODEL.CNESCLS15 -  
      SEA_STATE_BIAS.ALTI.ADAPTIVE_PROTO -  
      IONOSPHERIC_CORRECTION.MODEL.GIM -  
      WET_TROPOSPHERIC_CORRECTION.RAD -  
      DRY_TROPOSPHERIC_CORRECTION.MODEL.ECMWF -  
      DYNAMICAL_ATMOSPHERIC_CORRECTION.MODEL.MOG2D_HR -  
      OCEAN_TIDE_HEIGHT.MODEL.FES14B -  
      SOLID_EARTH_TIDE_HEIGHT.MODEL.CARTWRIGHT_TAYLER_71 -  
      POLE_TIDE_HEIGHT.MODEL.DESAI_2015
```

2.1.3 Ales product 'sla

```
sla = ORBIT.ALTI.CNES_POE_F -  
      range_20hz_ales -  
      MEAN_SEA_SURFACE.MODEL.CNESCLS15 -  
      sea_state_bias_20hz_ales -  
      IONOSPHERIC_CORRECTION.MODEL.GIM -  
      WET_TROPOSPHERIC_CORRECTION.RAD -  
      DRY_TROPOSPHERIC_CORRECTION.MODEL.ECMWF -  
      DYNAMICAL_ATMOSPHERIC_CORRECTION.MODEL.MOG2D_HR -  
      OCEAN_TIDE_HEIGHT.MODEL.FES14B -  
      SOLID_EARTH_TIDE_HEIGHT.MODEL.CARTWRIGHT_TAYLER_71 -  
      POLE_TIDE_HEIGHT.MODEL.DESAI_2015
```

2.2 Binning

Each track has been divided to a set of sections, where the center of each section is separated by the sample frequency of the satellite times it's velocity.

The data located within the sections limits represent the altimetry time-series on which the statistics will be calculated and visualized in this report.

2.3 Filtering

- The sla has been filtered by a threshold of 3 m.
- Each sla time-serie has been filtered by a window of $[-4\sigma, 4\sigma]$, where σ is the standard deviation of the sla time serie

3 Spatial coherence analysis

3.1 Range

3.1.1 Range 's count
